Previous Result

Comments for E613010476

Interpretation:

The serum level of IgG2 antibodies to a pool of pneumococcal polysaccharides is assayed before and, if necessary, following immunisation with 23-valent unconjugated pneumococcal polysaccharide vaccine (Pneumovax) as a test of an antibody response to a polysaccharide antigen. Reference data for antibody responses in healthy adults are not available, but as a guide at least a fourfold increase in antibody level is expected. However, antibody levels may not increase to this extent if the pre-immunisation level of antibody was high. When investigating a patient for a possible immunodeficiency disorder, the results of antibody tests must be considered in conjunction with the results of other immunological investigations and the clinical characteristics of the illness.

If post-immunisation antibody level is equivocal or high and clinical concerns persist, please ring QEII immunology on 6383 4303 to discuss the result with an immunologist. Serotype-specific pneumococcal serology can be requested on stored serum if clinically indicated.

CUMULATIVE IRON STUDIES (serum)

Date	Iron umol/L	Transferrin umol/L	TFN Satn %	Ferritin ug/L	Lab.No.
03/09/21	17	33	26	77	87107203
10/02/23	26	32	41	95	81866765

Ref: (12 - 31) (20 - 45) (15 - 55) (30 - 400)

81866765 Low-normal ferritin may indicate adequate iron stores, but iron deficiency is not excluded as co-existing inflammation or acute phase response may falsely raise ferritin. Correlate with clinical state.

- As ferritin is influenced by acute phase responses results in the lower-normal range (30-100) may not exclude iron deficiency.
- Ferritin levels >100 and < upper limit usually reflect adequate iron stores.
- Serum iron is useless in determining tissue iron stores.

Dr Johannes Conradie

Holo TC Assay (Siemens Atellica) > 146 pmol/L (> 40)
(Serum Active Vitamin B12)

Comment:

No suggestion of vitamin B12 deficiency.

High B12 levels are commonly seen with vitamin B12 replacement therapy.

Note from 19/07/2021, the Active B12 method has changed, and there has been a small adjustment in the reference range.

Instrument: Siemens Atellica

VITAMIN B12 and FOLATE (serum)

Vitamin B12 : 346 pmol/L (< 120 Deficient)
(150-750 Normal)

Serum Folate : 44.3 nmol/L (< 5.0 Deficient)
(=> 5.0 Normal)

COMMENT: Low-normal vitamin B12 with normal folate. B12 deficiency is not excluded and Active-B12 will be added.

Patient supplementation with high dose biotin may falsely increase serum folate (Atellica assay). If concerned with the result, consider withholding biotin for 24 hours prior to repeating the test. Please contact the laboratory for further information.

Instrument: Siemens Atellica
