Copy to:
DR DILINI PATHIRATNE

Name of Test: Mam Tomosynthesis - Bilateral, U/S Breast Bilateral
Requested: 23/01/2023 **Collected:** 22/02/2023 **Reported:** 22/02/2023
12:33

Bilateral Mammogram/Tomosynthesis & Ultrasound

Clinical History
Follow-up of breast cancer.

Findings

Bilateral Mammogram/Tomosynthesis

I have compared with previous mammograms dated 18 March, 2022.
There are post-surgical changes adjacent to the right nipple and laterally in the left breast.
Both breasts otherwise reveal moderately dense glandular stroma in all quadrants with a few scattered benign calcifications.
No stromal distortion or malignant type microcalcification seen in either breast.

Ultrasound

Both breasts were fully examined and I have compared with previous ultrasound dated 18 March, 2022.
There is an ovoid lesion in the right breast at 9 o'clock radial 2 cm from the nipple measuring up to 6 mm, probably a fibroadenoma, it is unaltered from previous.

In the left breast at 12 o'clock radial 4 cm from the nipple an ovoid 4 mm lesion is seen. There is a hypoechoic lesion at 2 o'clock radial 5 cm from nipple measuring up to 6 mm. These are unaltered on comparison with previous. No other lesions in the left breast. No abnormality in the left axilla.

Conclusion

Post-surgical changes bilaterally as described above.
Few ovoid lesions in both breasts which are stable.
No mammographic or ultrasonic evidence to suggest malignancy.

Thank you for referring this patient.

Sonographer: A. Woolaston
