CT CERVICAL SPINE, RIGHT SHOULDER 29/08/2024 Reference: 16556373

CT CERVICAL SPINE

HISTORY:  
Persistent pain and tightness.

FINDINGS:  
In the imaged position, there is apparent straightening of the cervical lordosis. No subluxation.  
There is no fracture. No suspicious bone lesion.  
Vertebral body and intervertebral disc height is normal.  
There is no disc protrusion identified throughout the cervical spine.  
No canal or foraminal narrowing.  
The cervical facet joints appear normal.  
The paravertebral soft tissues are unremarkable.

COMMENT:  
No significant abnormality identified to account for the patient's symptoms.

CT RIGHT SHOULDER

HISTORY:  
Persistent pain and tightness right shoulder and scapula.

FINDINGS:  
No evidence of glenohumeral osteoarthritis.  
There is heterotopic ossification in the coracoclavicular ligaments, consistent with previous acromioclavicular joint sprain. The
