ULTRASOUND RIGHT SHOULDER

CLINICAL HISTORY:

Right shoulder pain for 3 weeks.

FINDINGS:

Calcific tendinopathy involves both the supraspinatus and infraspinatus tendons. The subscapularis shows tendinopathy challenge but without calcification. The long head of biceps appears normal. No tendon tears are seen. Thickening of the subdeltoid bursa is noted and bursal impingement is seen on dynamic testing.

COMMENT:

Calcific supraspinatus and infraspinatus tendinopathy with subdeltoid bursitis and impingement.

Thank you for your referral.

Yours sincerely,

Dr Grant Withey

FRANZCR

Sonographer: AL/DH
