Clin notes

SARS-CoV-2 Serology

 Date 30/05/23
 Time 10:03
 LabNo 21272890

Specimen:	Serum
Anti-S protein IgG:	Positive
IgG Quant Raw:	14698.60
Anti-N protein IgG:	Negative
Anti-S protein IgM:	Positive

Serology is consistent with vaccination against SARS-CoV-2. No serological evidence of past infection although antibody to nucleocapsid antigen may not always be formed or can wane. Based on current understanding, SARS-CoV-2 IgG will develop in more than 90% of individuals 2-3 weeks post infection or vaccination. It is unknown whether or for how long, IgG protects from SARS-CoV-2 re-infection.

SARS-CoV-2 quantitative IgG performed on the Abbott Alinity platform. Values > 50 AU/mL (Arbitrary units / mL) are considered positive.
