Clinical notes

SARS-CoV-2 Serology

Date 19/04/24
Time 09:30
LabNo 25190927

Specimen:	Serum
Anti-S protein IgG:	Positive
IgG Quant Raw:	6575.42
Anti-N protein IgG:	Negative

Serology is consistent with vaccination against SARS-CoV-2. No serological evidence of past infection although antibody to nucleocapsid antigen may not always be formed or can wane. Based on current understanding, SARS-CoV-2 IgG will develop in more than 90% of individuals 2-3 weeks after infection or vaccination. It is unknown whether or for how long, IgG protects from SARS-CoV-2 infection/re-infection.

SARS-CoV-2 quantitative IgG performed on the Abbott Alinity platform. Values > 50 AU/mL (Arbitrary units / mL) are considered positive.

SURGERY USE

- ☐ Normal
- ☐ No Action/File
- ☐ Patient Notified
- ☐ Make Appoint.
- ☐ Further Tests
- ☐ Notes Required
- ☐ Speak with Dr.
- ☐ On Correct Treatment
