Thank you for seeing Mrs Ladan Saghafi, aged 35 yrs. Ladan is a lovely young lady who has developed increasing back pain starting in her lower back with right sided sciatica paraesthesia symptoms, Now thoracic pain and also right arm paraesthesia.
Ladan has had a blood screen for inflammatory arthritis all negative.

MRI as reported

Cant understand why so much disc degeneration and significant symptoms. Please review scans and Ladan.

Examination Performed: MRI LUMBAR SPINE

CLINICAL DETAILS:

Right leg spontaneous scatica

TECHNIQUE:

MR lumbar spine

FINDINGS:

Normal lumbar spine alignment, segmentation and lordosis. No scoliosis.

No acute vertebral fracture or suspicious marrow signal abnormality.

The conus lies at the level of the L1 vertebral body. Normal appearance of the distal thoracic cord. No paravertebral soft tissue mass.

Normal sacroiliac joints.

L1/2:

No disc protrusion, canal stenosis or nerve impingement

L2/3:

No disc protrusion, canal stenosis or nerve impingement

L3/4:

No disc protrusion, canal stenosis or nerve impingement

L4/5:

No disc protrusion, canal stenosis or nerve impingement.

L5/S1:

Desiccation with mild loss of disc height. Shallow posterior disc bulge with small annular tear. This contacts but does not definitely impinge the descending S1 nerve. No canal stenosis. Marked mild facet arthropathy.

COMMENT:

Mild spondylosis L5-S1, not resulting in any significant spinal canal narrowing. The disc bulge contacts but does not definitely impinge the descending S1 nerve roots.

Mild bilateral facet arthropathy L5-S1, which may contribute to any lower back pain.

MRI CERVICAL AND THORACIC SPINE

CLINICAL:

Right arm paraesthesia. Left thoracic chest pain.

TECHNIQUE:

Non-contrast MRI of the cervical and thoracic spine with multiplanar multisequence imaging.

FINDINGS:

7 cervical and 12 thoracic type vertebra.

Satisfactory spinal alignment.

No destructive bone lesion or significant bone marrow oedema.

C3/4 disc desiccation and generalised annular disc bulge. Mild spinal canal stenosis. No neural foraminal stenosis.

C4/5 disc desiccation without significant spinal canal or neural foraminal stenosis.

C5/6 disc desiccation and posterior disc protrusion. Mild spinal canal stenosis. No neural foraminal stenosis.

In the thoracic spine, there is T7/8 disc desiccation and posterior disc protrusion causing mild spinal canal stenosis. Flattening of the thoracic cord and mild increased left cord signal.

T9/10 intervertebral disc vacuum phenomenon.

Conus terminates below L1.

No high-grade facet joint arthropathy or active facet joint oedema.

COMMENTS:

*C3/4, C4/5 and C5/6 disc disease without neural impingement.

*T7/8 posterior disc protrusion causing mild spinal canal stenosis, flattening of the thoracic cord and mild increased left cord signal.

Serum Folate Assay:
Adequate Serum Folate.
In the absence of recent oral intake, a serum folate >13 nmol/L effectively rules out folate deficiency. Consider repeat fasting Folate, if there has been inadequate fasting, and clinical concern remains.

Serum Vitamin B12 Assay:
Essentially normal B12 levels, although liver disease if present may falsely elevate the level.

Methodology:
B12 and Active B12 (HoloTC) assays performed on Siemens Atellica analyser.

AUTOANTIBODY SEROLOGY

Anti-CCP antibody < 1 U/mL (< 5)

Anti-cyclic citrullinated peptide (CCP) antibody is highly specific and moderately sensitive for the diagnosis of rheumatoid arthritis (RA). Some rheumatoid arthritis patients may be rheumatoid factor (RF) negative but may have positive anti-CCP antibodies. Anti-CCP antibody (and RF) positivity is associated with an increased risk of erosive disease in RA. The role of serial measurement of anti-CCP as a marker of disease activity in RA has not been established.

RHEUMATOID SEROLOGY

Rheumatoid Factor (RA latex) < 14 IU/mL (0-14)

COMMENT

Result within normal limits.

Rheumatoid factor (RF) may be detected in up to 60% of patients with rheumatoid arthritis. However RF is also found in other disease states including autoimmune diseases, infective diseases and neoplasia. RF may also be detected in healthy individuals.

Anti-CCP antibody is a specific test for rheumatoid arthritis and has prognostic significance. Anti-CCP antibody testing is recommended in the diagnosis of rheumatoid arthritis.

Time 09:01
Lab No 75400919

CRP < 5 mg/L(0-6)

C-reactive protein (CRP) is a non-specific indicator of tissue damage.
The level rises rapidly (within 6-10 hours) after tissue injury, peaks at 48-72 hours and returns to normal within a few days. Common causes of markedly increased CRP include infection (particularly bacterial), trauma, surgery, myocardial infarction, many malignancies and inflammatory disorders.

Tests Completed:TSH, LATEX/RHEUMATOID, IRON STUDIES, FBC, SERUM FOLATE
Tests Completed:SERUM VITAMIN B12, SE E/LFT, SE HDL, SE C-REACTIVE PROTEIN, ESR, CCP
Tests Pending :RRV AB, BARMAH FOREST AB, ANA
