**Referring Practitioner:**

Dr Andrew WALTON  
Cannonvale Medical Centre

**Patient Name:** Jessica BOYLE-ENGLISH

**DOB:** 05-12-1993

**Patient ID:** 100544

**Exam ID:** 103574

**Examination Date:** 12 November 2021

**ULTRASOUND PELVIS**

**Clinical Notes:**

Irregular periods. Known endometrial polyp. Follow up O-RADS 3 cyst right ovary.

**Findings:**

Transabdominal and transvaginal scan performed. The cervix measures 3cm and is normal. The uterus is anteverted with a volume of 37cc and homogeneous myometrium with no fibroids. The endometrial thickness is 7mm with a left fundal endometrial polyp again seen with a vascular pedicle noted and the polyp measures 6 x 9 x 3mm and is unchanged when compared to previous imaging.

The right ovary has a volume of 6cc and the left 1cc and both are normal in size and echo pattern. The previously imaged complex O-RADS 3 cyst in the right ovary is not visualised on today's examination. There is free movement of the pelvic organs. There are no adnexal masses or free fluid.

**Opinion:**

**Unchanged appearance of the previously imaged endometrial polyp.**

**The previous O-RADS 3 cyst in the right ovary is not seen on today's examination most likely resolved.**

Thank you for referring this patient.
