## MICROBIOLOGY

### SEMEN ANALYSIS - FERTILITY STUDIES

Time of collection 14:50 hr  
Time of examination 15:45 hr

Method of collection Not stated  
Full Ejaculate Not stated  
Volume **0.6 mL** (> 1.5)

Count 77 x 10<sup>6</sup>/mL (> 14)

Motility 53 % Progressive motility  
8 % Non-progressive motility  
39 % Non-motile

Morphology 6 % normal forms (> 3)

The seminal volume is significantly decreased. This may contribute to decreased fertility.

Motility is within normal limits (total motility is > 39%).

Spermatozoa Count, Motility and Morphology Reference ranges have been changed to reflect changes in the World Health Organisation Recommendations, 2010.

Several semen samples, collected over a 3-6 week period, should be examined if an abnormality is noted in the first sample.

TESTS COMPLETED: SEM,
