ULTRASOUND ABDOMEN 07/01/2025 Reference: 4329065

ULTRASOUND ABDOMEN

Clinical History: ?pancreatitis/family history of aneurysm.

Additional Information:

Relevant surgical history: Past history of repair of bowel and spleen 30 yrs ago.

Comparison: CT scan abdomen, Radiant Radiology, dated 12/08/2022.

Scan quality: Suboptimal due to excessive bowel gas and high liver position.

Findings:

The liver is normal in size and echotexture. No suspicious focal liver lesion.

The portal vein is patent and demonstrates normal antegrade flow.

The gallbladder is normal and no gallstone seen.

CBD is obscured by bowel gas.

Poorly seen pancreas.

The spleen is normal in size measuring 106.5mm in length. No concerning focal lesion.

The right kidney measures 112mm in length. No calculus or hydronephrosis or concerning focal lesion.

The left kidney is normal in size measuring 113.5mm in length. Three renal cortical cysts are seen (largest cortical cyst, 42mm, upper pole, simple morphology). Increased in size. Previously measured 24mm. No renal calculi or hydronephrosis or concerning focal area is seen.

The abdominal aorta is normal in calibre measuring 18.7mm.
No free fluid is seen in the abdomen.

Conclusion:

Multiple small left renal cysts, the largest measuring 42mm in the upper pole (which has increased in size).

No features of aortic aneurysm.

No gross abnormality in the pancreas within the limits of the study.

Thank you for referring this patient.

Typist: ajk/dev

Radiologist: Dr R. Eswaren
