### Faeces PCR

Specimen Type	Faeces
<b>Parasites:</b>	
Giardia intestinalis	Not Detected
Cryptosporidium	Not Detected
Dientamoeba fragilis	Not Detected
Entamoeba histolytica	Not Detected
Blastocystis hominis	* Detected

### Bacteria:

Campylobacter spp.	Not Detected
Salmonella spp.	Not Detected
Shigella spp./EIEC	Not Detected
Yersinia enterocolitica	Not Detected
Aeromonas	Not Detected
Comments on Collection 528649740	

DNA consistent with the presence of Blastocystis hominis has been detected using PCR with specific primers and probe. The pathogenic role of Blastocystis spp has not been proven, particularly in immunocompetent individuals. Using molecular techniques, the overall prevalence in our test population is 17%. Individuals may be colonised with this organism and do not need treatment. It can be acquired by contact with animals including pets or contaminated water. Potentially pathogenic or animal strains cannot be differentiated by the current available tests. Screening for clearance of the organism or testing of family members is not recommended.

Only the reported enteropathogens have been tested.

All bacterial causes of gastroenteritis reported by PCR are cultured for recovery of isolates subject to organism viability and a further report issued. Some clinical indications e.g overseas travel, eosinophilia, seafood or antibiotic ingestion will require additional parasite concentration examination, culture setup or molecular testing to detect alternative pathogens e.g. hookworm, strongyloides, Vibrios, Clostridium difficile infection (CDI), Enterohaemorrhagic E. coli (STEC). These indications should be highlighted on the request.

Roche LightMix Gastroenteritis multiplex PCR assays were utilised for testing.  
For further enquiries regarding these results please contact  
Dr Jenny Robson or Dr Sarah Cherian (07 3377 8534).
