GROUP and ANTIBODY SCREEN

Patient Blood Group : A Rh(D) Negative

Current Antibody Screen : Positive

Current ACL Antibody : 21/01/2025 Anti-D

This antibody is clinically significant and in an obstetric patient could have Haemolytic Disease of the Foetus and Newborn implications. ANZSBT Guidelines recommend repeat antibody testing and titrations every 4 weeks until 28 weeks gestation, after which testing is required fortnightly. Levels equal to and above 32 should be referred to a feto-maternal specialist.
