Hepatitis Serology

Hep B surface antigen	Not Detected
Hep B core antibody (total)	Not Detected
Hep C antibody	Not Detected

Comments on Collection 423319615

Hepatitis B - No serological evidence of current or past Hepatitis B virus infection. In some cases, Hepatitis B surface antigen may be negative for up to 3 months following exposure. Depending on the time of exposure, repeat testing may be indicated.
If testing for immunity is required, please contact the laboratory and request Hepatitis B surface antibody.

Hepatitis C - No serological evidence of Hepatitis C virus infection. In the majority of cases antibody to Hepatitis C is detectable 8 weeks post exposure, however seroconversion may take up to 6 months. Depending on the time of last exposure, repeat serological testing may be indicated.

Lab No.	490576444	422481372	423319615		
Syphilis antibody	N	N	N		

Code Key

Syphilis antibody : N = Not Detected

Comments on Collection 02/01/25 0922:

No serological evidence of current or past Treponemal infection.
However if recent exposure is suspected, a follow-up test in 4-6 weeks is recommended.

A dry swab of a mucocutaneous lesion, if present, may be submitted for Syphilis PCR.

Routine syphilis screening is now advised for all pregnant women in WA at least three times (at booking, 28 weeks, and 36 weeks or at preterm birth). Additional screening at birth and 6 weeks post-partum may be required for higher risk women in the Kimberley, Pilbara, and Goldfields.

Comments on Collection 02/01/25 0922:

If at risk of falls or fractures suggest reassess Vitamin D at end of winter.

Medicare rebates for vitamin D testing are available for patients at risk of Vitamin D deficiency such as all those with chronic lack of sun exposure.

As 37% of Vitamin D requests in our practice show deficiency, we presume that your patient complies with the funding criteria. If this is not the case, please contact our accounts dept.

ANZBMS updated Position Statement Vitamin D and health in adults in Australia and New Zealand MJA 196 (11) 2012.
Vitamin D adequacy: >49 nmol/L at the end of winter (level may need to be 10-20 nmol/L higher at the end of summer, to allow for seasonal decrease).

Mild Deficiency	30-49	nmol/L
Moderate Deficiency	12.5-29	nmol/L
Severe Deficiency	< 12.5	nmol/L

25OH Vit D	62	55	97	97	nmol/L	(50-150)

Comments on Collection 02/01/25 0922:

If at risk of falls or fractures suggest reassess Vitamin D at end of winter.

Medicare rebates for vitamin D testing are available for patients at risk of Vitamin D deficiency such as all those with chronic lack of sun exposure.

As 37% of Vitamin D requests in our practice show deficiency, we presume that your patient complies with the funding criteria. If this is not the case, please contact our accounts dept.

ANZBMS updated Position Statement Vitamin D and health in adults in Australia and New Zealand MJA 196 (11) 2012.
 Vitamin D adequacy: >49 nmol/L at the end of winter (level may need to be 10-20 nmol/L higher at the end of summer, to allow for seasonal decrease).

Mild Deficiency	30-49	nmol/L
Moderate Deficiency	12.5-29	nmol/L
Severe Deficiency	< 12.5	nmol/L
