Non HDLC	4.44 H	4.61 H	5.00 H	2.92	(<3.81)		mmol/L	

Comments on Collection 26-Feb-25 1044:

HDL-Cholesterol

LDL is now calculated by the Sampson equation which allows an accurate result at higher triglyceride levels.

The National Vascular Disease Prevention Alliance (NVDPA) guidelines recommend a target level of less than 2.5 mmol/L for non-HDLC.

TARGET LEVELS:

The National Vascular Disease Prevention Alliance (NVDPA) treatment target levels for high risk people (known coronary heart and other arterial disease, diabetes, chronic renal failure, Aboriginal and Torres Strait Islander peoples and familial hyperlipidaemic conditions) are:

Total Cholesterol <4.0 mmol/L
HDL-Cholesterol >=1.00 mmol/L
Fasting Triglycerides <2.0 mmol/L
Non-HDL Cholesterol <2.5 mmol/L

Increased non-HDL Cholesterol is the most significant marker for subclinical atherosclerosis (ref: Cardiology Today 2013; 3(2) : pp25-27).

M/C/S Genital Swab 1

Site	High Vagina Swab
Leucocytes	Occasional
Epithelial Cells	+
Gram positive bacilli	+++

Culture Following organism(s) isolated:

Organism 1 Candida albicans

Light growth

Comments: 519285668

Vulvovaginal candidiasis due to *Candida albicans* is usually amenable to intravaginal preparations. Options with at least 80% efficacy include a vaginal imidazole (eg clotrimazole 10% vaginal cream 1 applicatorful intravaginally, as a single dose at night) or nystatin 100 000 units/5 g vaginal cream 1 applicatorful intravaginally, 12-hourly for 7 days. Topical therapy may itself cause irritation. Nystatin, although less effective, is generally better tolerated than the imidazoles. If the patient is intolerant of topical therapy or would prefer to use oral therapy, for non pregnant patients, an option is fluconazole 150 mg orally, as a single dose. Antibiotic Guidelines 2010
