HbA1c

Date	15/07/20	26/11/24		
Time F-Fast	1526	0731 F		
Lab ID	845600916	853240911	Units	Reference
HbA1c (IFCC)	35		mmol/mol	(20-38)
HbA1c	5.3		%	(4.0-5.6)
HbA1c (IFCC)		31	mmol/mol	(20-38)
HbA1c (NGSP)		5.0	%	(4.0-5.6)

Comments on Collection 26/11/24 0731 F:

HbA1c less than 48 mmol/mol (6.5%) does not exclude a diagnosis of diabetes mellitus based upon elevated glucose results. The existing diagnostic criteria for fasting and random glucose levels and for oral glucose tolerance testing remain valid, and are the diagnostic tests of choice for gestational diabetes, type 1 diabetes and in the presence of conditions that interfere with HbA1c measurement. Conditions which may affect the measured HbA1c value include any of the haemolytic anaemias, anaemia of chronic disease, severe liver disease, vitamin B12 and/or folate deficiency, the haemoglobinopathies and regular phlebotomy performed for medical indications or for blood donation.

It also should be noted that further investigation is required for any inexplicably low HbA1c level or significant discrepancy between HbA1c and glucose results.

N.B. HbA1c is not recommended as a diagnostic test for gestational diabetes mellitus (GDM).

Blood Bank Serology

Blood Group B Rh(D) Positive

Antibody Screen Negative

Comment on Lab ID 853240911

ANZSBT Antenatal guidelines recommend that all Rh(D) negative women should have red cell antibody screening performed at their initial antenatal visit and at least once between 28 and 36 weeks gestation. In the context of routine antenatal prophylaxis, this should be undertaken prior to the administration of the first dose of RhD immunoglobulin, at 28 weeks. However additional testing is appropriate when there is a history of significant antibodies, blood transfusions or traumatic deliveries.

Vitamin D	50	64	101	nmol/L	(50-140) #

Comments on Collection 26/11/24 0731 F:

According to the Position Statement 'Vitamin D and health in adults in Australia and New Zealand' MJA, 196(11):686-687, 2012, Vitamin D status is defined as:

Mild Deficiency	30	-	49 nmol/L
Moderate Deficiency	12.5	-	29 nmol/L
Severe Deficiency	<12.5		nmol/L

Vitamin D adequacy can be defined as a level >49 nmol/L at the end of winter - the level may need to be 10 - 20 nmol/L higher at the end of summer, to allow for seasonal decrease.

From 1st November 2014, Medicare rebates for vitamin D testing will apply to patients at risk of Vitamin D deficiency such as chronic lack of sun exposure.
