ANTINUCLEAR ANTIBODY SEROLOGY

| TITRE | PATTERN     |
|-------|-------------|
| 1:160 | Nucleolar   |
| 1:80  | Homogeneous |

A low titre ANA is present. Testing for anti-dsDNA and ENA is suggested in patients with suspected autoimmune disease. A low titre ANA may be found in a proportion of well individuals without clinical autoimmune disease.

Nucleolar ANA patterns are described in patients with Scleroderma spectrum disorders, Raynaud's phenomenon and other autoimmune disorders. Testing for ENA and anti-dsDNA is suggested if not already ordered.

A homogeneous ANA pattern is associated with antibodies to double-stranded DNA, single-stranded DNA and histones, and may be seen in SLE or drug-induced lupus. Suggest further testing for antibodies to dsDNA and ENAs if not already performed.

For enquiries, contact Dr Paul Campbell 07 3121 4444  
Patients should contact their referring doctor in regard to this result.

Serum Zinc 11 umol/L (10-25)
