CA15.3	15	14	U/mL	(<30)

Comments on Collection 20/10/20 Unkn F:
CA 15.3 levels are elevated in about 40% of patients with non-metastatic and 85% with metastatic breast cancer. In most, but not all, patients levels parallel the clinical course. Elevated levels are also documented in some patients with liver disease and with other malignancies (ovary, lung) and possibly in other conditions. Levels may increase transiently following chemotherapy or radiotherapy due to tumour necrosis.
CA15.3 performed using Abbott CMIA.
