Comments on Collection 15-Mar-24 0846:
 Haem Corrected K

Note: The potassium result has been corrected for haemolysis. The corrected value is likely to be within +/- 0.2 mmol/L of the "real" value. The correction only accounts for in-vitro haemolysis, not for in-vivo causes such as thrombocytosis, leukocytosis and intravascular haemolysis. If the patient is known to have significant in-vivo haemolysis, please notify the

laboratory as soon as possible as the potassium correction will be inappropriate.

E/LFT

Specimen haemolysed. Affected tests have been deleted.

Please Note: Difficult collection.

Please note: Due to the small volume of serum available for testing, there will have been an increased loss of dissolved CO₂, potentially resulting in a falsely decreased serum bicarbonate value.
