Results

Iodine, Serum

Normal range: 40.0 - 92.0 ug/L

INTERPRETIVE INFORMATION: Iodine_Serum

Values greater than 250 ug/L may indicate iodine overload.

Elevated results may be due to skin or collection-related contamination, including the use of a noncertified metal-free collection/transport tube. If contamination concerns exist due to elevated levels of serum iodine, confirmation with a second specimen collected in a certified metal-free tube is recommended.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the U.S. Food and Drug Administration. This test was performed in a CLIA-certified laboratory and is intended for clinical purposes.
