Androgens

Test Name	Result	Reference Interval	Units
Testosterone	20.4	11.0 - 40.0	nmol/L
SHBG	53	10.0 - 70.0	nmol/L
Calculated Free Testosterone	337	260 - 740	pmol/L

Comments

In males SHBG levels are often increased in hypogonadism, gynaecomastia, cirrhosis of the liver, thyrotoxicosis and during the administration of anti-epileptic drugs.
SHBG performed on the Abbott immunoassay.

The Vermuelen calculation is the preferred measurement of free testosterone, and overcomes some of the inaccuracies of the FAI ratio.
Calculated free testosterone reference interval established in a cohort of young healthy males aged 20 - 35 years. In older healthy males calculated free testosterone may drop down to 90 pmol/L.
