Prolactin

Test Name	Result	Reference Interval	Units
Bioactive Prolactin	288	<350	mIU/L

Test Name	Result	Reference Interval	Units
● Prolactin	1080 H	<500	mIU/L
● Macroprolactin	Detected *		

Comments

All sera with increased total prolactin concentrations are routinely tested for the presence of macroprolactin. This is a variant form of prolactin (often bound to antibodies) which cross-reacts in the assay but is considered biologically inactive. When corrected for macroprolactin, **the bioactive (monomeric)** concentration of prolactin in this serum is **normal**. Macroprolactin is not an uncommon finding and is not considered to be of any pathological significance.

Androgens

Test Name	Result	Reference Interval	Units
Testosterone	1.3	<2.2	nmol/L
SHBG	35	20.0 - 110.0	nmol/L
Calculated Free Testosterone	23	3 - 37	pmol/L

Comments

SHBG performed on the Abbott immunoassay.

The Vermuelen calculation is the preferred measurement of free testosterone, and overcomes some of the inaccuracies of the FAI ratio.
