

Patient Name	WALKER, CHANTELE	Accession	PR-17312391-US
Patient D.O.B.	10/11/1986	Description	DEE-US RIGHT SHOULDER
Patient ID	PR-GFH984V	Study Date/Time	29/05/2025 16:08
Referring Physician	MAIOLO, ROBYN	Modality	US

**ULTRASOUND RIGHT SHOULDER****HISTORY:**

Right shoulder pain.

**COMPARISON:**

None available.

**FINDINGS:**

The long head of biceps tendon is intact and located in the bicipital groove.

The rotator cuff tendons are intact. There is no evidence of tendinopathy.

There is mild thickening of the subacromial-subdeltoid bursa, with bursal impingement on abduction.

The AC joint is normal.

Mildly restricted shoulder abduction. There is pain on external rotation.

**COMMENT:**

1. No evidence of rotator cuff pathology.
2. Mild subacromial-subdeltoid bursitis with impingement.

No other abnormality identified to account for the patient's symptoms.

Reporter: Dr Andrew Carter

*Did you know that recent technological advancements in our MRI scanners have reduced scan times to under 10 minutes for most exams? This upgrade enhances patient comfort and significantly lowers the risk of claustrophobia.*
