

16 Apr 2019 16:28	Serum urate level; Serum C reactive protein level; Anti CCP	Report ID: 1960700964	RM100 1229350
-------------------	---	-----------------------	---------------

Request Receipt:

Request Comments:

Issued: 16 Apr 2019 16:28

Provider Comments:

Arrived: 18 Apr 2019 17:11

Service Type: New

Financial Details:

Follow-up action: No Further Action

Clinical Information: recurrent UTI and genital ulcers [swabs and UTI investigation NAD]

Serum urate level (XM0ls)

Specimen: SST Serum

Collected: 16 Apr 2019 11:10

Investigation	Normality	Result
Serum urate level (XM0ls)		243 umol/L [140.0 - 360.0]

Serum C reactive protein level (XaINL)

Specimen: SST Serum

Collected: 16 Apr 2019 11:10

Investigation	Normality	Result
Serum C reactive protein level (XaINL)	Above range	19 mg/L [0.0 - 10.0]; Above high reference limit

Anti CCP

Specimen: TYPE UNSPECIFIED

Collected: 16 Apr 2019 11:10

Investigation	Normality	Result
Anti CCP		
Serum anti-cyclic citrullinated peptide antibody level (XabFb)		< 0.5 U/mL [0.0 - 5.0]
Comments		Negative. A negative result does not exclude the diagnosis of RA (approx. 35% of patients with RA have a negative CCP) but it supports an alternative clinical diagnosis (95% of patients with an alternative diagnosis have a negative test). If your patient has an inflammatory arthropathy they may still need a rheumatology referral despite a negative result.
