Clinical Notes 46yo F, annual bloods - history of iron deficiency

Requested 30/05/2025

Collected 02/06/2025 07:28

Received 02/06/2025 07:28

C Reactive Protein

Test Name	Result	Reference Interval	Units
CRP	1.9	<5	mg/L

Comments

CRP is a more sensitive early indicator of an acute phase response than is ESR. It also returns towards normal more rapidly with improvement or resolution of the disease process.

If CRP is elevated, it can indicate disease activity of an inflammatory, infective or neoplastic nature.

Artefactually decreased CRP values occur when patients are treated with antibiotics containing carboxypenicillins including Ticarcillin.
