As pathology provider for the National Bowel Cancer Screening Program (the Program), we are writing to provide you with an immunochemical faecal occult blood test (iFOBT) sample analysis for the Program.

Recently, your patient or a patient who has nominated your practice, participated in the Program and tested **NEGATIVE** for faecal occult blood. The patient has been advised of this result.

You may wish to encourage your patient to continue with regular bowel cancer screening every two years until they turn 74 years. Your patient has been advised to contact you immediately if they have, or develop, any symptoms.

If you have any questions about the Program, please visit www.health.gov.au/nbcsp or call the National Cancer Screening Register on 1800 627 701 during business hours on Monday to Friday, between 8:30am and 6pm (except public holidays).

Iron Studies
Normal Iron Status.

All patients with low or equivocal vitamin B12 results (400 pmol/L or less) will be routinely tested for holo-transcobalamin (active B12) to clarify the B12 status.
Both tests are now Medicare rebateable. Vitamin B12 concentrations over 400 pmol/L are generally considered replete.

Active B12 (holotranscobalamin) is the biologically active fraction of total serum B12, and should be a superior indicator of B12 status.
Holotranscobalamin level indicates Vitamin B12 deficiency unlikely.
Up to 15% of patients will have a deficiency of carrier protein (haptocorrin) that does not appear to result in a clinically recognisable Vitamin B12 deficiency despite low total Vitamin B12 levels.

In patients with a significant risk of adverse outcome from hypoglycaemia (children <16 and adults >70 years), higher target values may be appropriate.

An alternative test to monitor diabetes such as serum fructosamine is advisable in the presence of altered red cell lifespan.

HbA1c performed on the Sebia Cap3 analyser by capillary electrophoresis.

HDL-Cholesterol
 Progress lipid levels.
 LDL is now calculated by the Sampson equation which allows an accurate result at higher triglyceride levels.
 The National Vascular Disease Prevention Alliance (NVDPA) guidelines recommend a target level of less than 2.5 mmol/L for non-HDL.
TARGET LEVELS:
 The National Vascular Disease Prevention Alliance (NVDPA) treatment target levels for high risk people (known coronary heart and other arterial disease, diabetes, chronic renal failure, Aboriginal and Torres Strait Islander peoples and familial hyperlipidaemic conditions) are:

Total Cholesterol <4.0 mmol/L
 HDL-Cholesterol >=1.00 mmol/L
 Fasting Triglycerides <2.0 mmol/L
 Non-HDL Cholesterol <2.5 mmol/L

Increased non-HDL Cholesterol is the most significant marker for subclinical atherosclerosis (ref: Cardiology Today 2013; 3(2) : pp25-27).
