Faeces PCR

Specimen Type

Faeces

Parasites:

Giardia intestinalis	Not Detected
Cryptosporidium	Not Detected
Dientamoeba fragilis	Not Detected
Entamoeba histolytica	Not Detected
Blastocystis hominis	Not Detected

Bacteria:

Campylobacter spp.	Not Detected
Salmonella spp.	Not Detected
Shigella spp./EIEC	Not Detected
Yersinia enterocolitica	Not Detected
Aeromonas	Not Detected

Comments on Collection 533585444

Not detected results indicate the absence of detectable nucleic acids in this sample for the enteropathogens reported. Only the reported enteropathogens have been tested.

All bacterial causes of gastroenteritis reported by PCR are cultured for recovery of isolates subject to organism viability and a further report issued. Some clinical indications e.g overseas travel, eosinophilia, seafood or antibiotic ingestion will require additional parasite concentration examination, culture setup or molecular testing to detect alternative pathogens e.g. hookworm, strongyloides, Vibrios, Clostridium difficile infection (CDI), Enterohaemorrhagic E. coli (STEC). These indications should be highlighted on the request.

Roche LightMix Gastroenteritis multiplex PCR assays were utilised for testing.

For further enquiries regarding these results please contact Dr Jenny Robson or Dr Sarah Cherian (07 3377 8534).

Helicobacter pylori

Faecal H. pylori Ag (ChLIA) Negative
Comments on Collection 533585444

A Negative result for Faecal Helicobacter antigen in most cases indicates no current infection with Helicobacter pylori.

If the patient is on antimicrobials not specifically prescribed for the eradication of H. pylori or proton pump inhibitors or bismuth preparations, the Faecal Helicobacter antigen may be falsely negative. The test result is valid if use of these medications have been ceased for a minimum of 2 weeks or in the case of specific anti-helicobacter treatment for a minimum of 4 weeks prior to the collection of the specimen. A false negative result may also occur if the patient has diarrhoea.
