Endometrial Thickness (mm): **6.5** Endometrial Quality: **B (Homogeneous)**

Comments

Prep for tx scan, had has AMH and TSH today

Cycles range from 28-42 days, currently CD19. Holly has had a number of internal scans before (in relation to fertility and miscarriages) reports prev scans have shown cysts but no other concerning features.

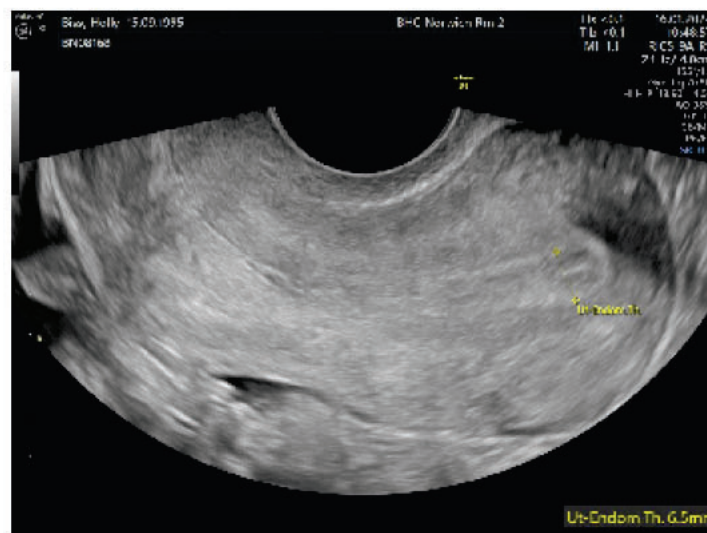

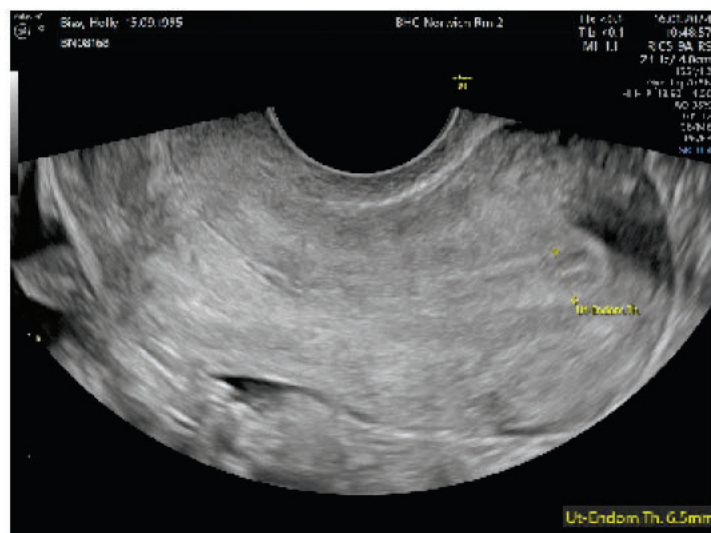

Anteverted uterus, 3D image shows normal shaped cavity.

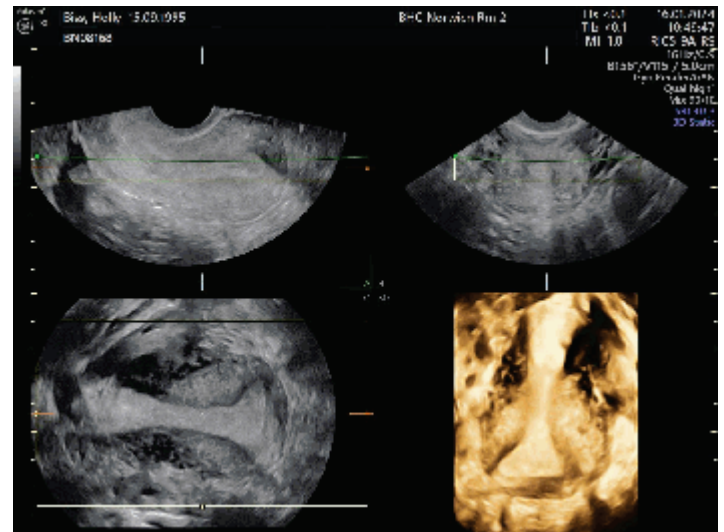

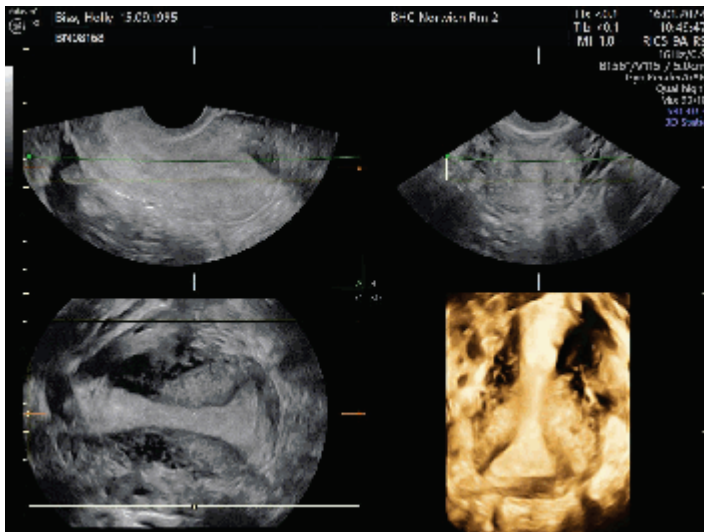

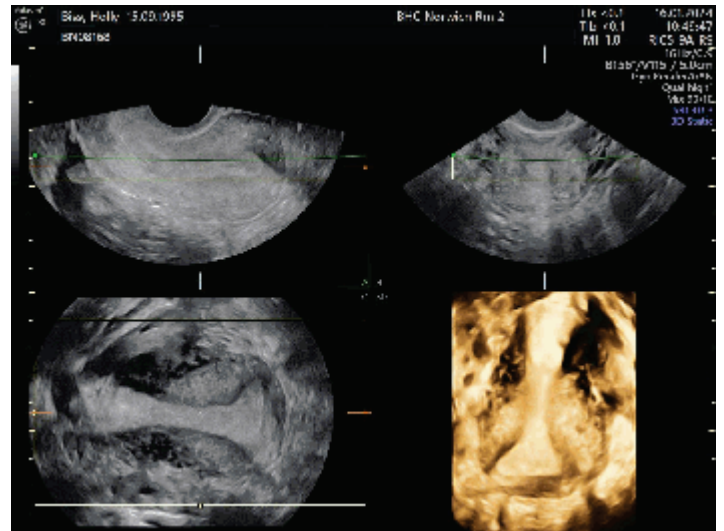

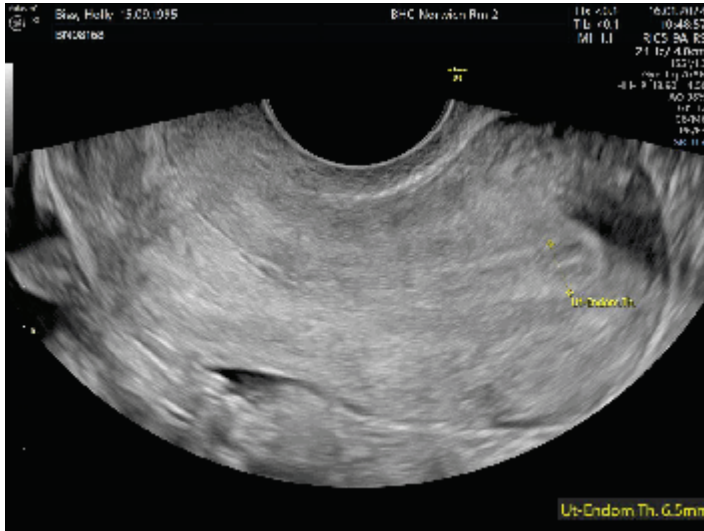

Both ovaries visualised and appear accessible, good AFC on both ovaries, RO had significantly more follicles than LO today, and also contained a corpus luteum - small area of free fluid adjacent to RO, explained likely due to recent ovulation.

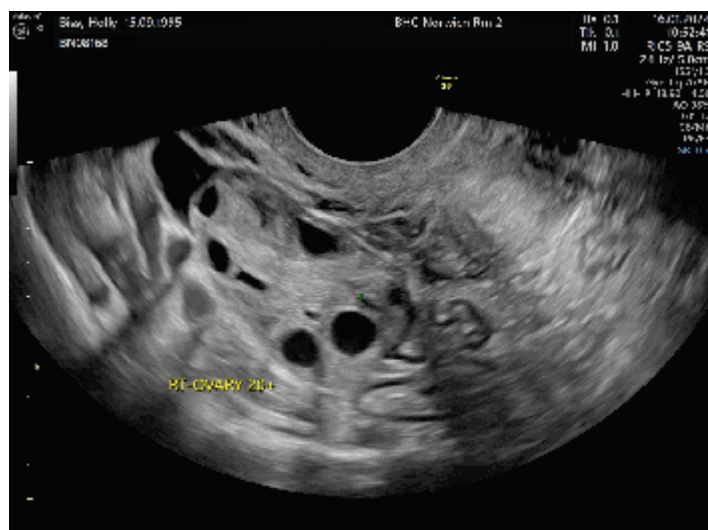

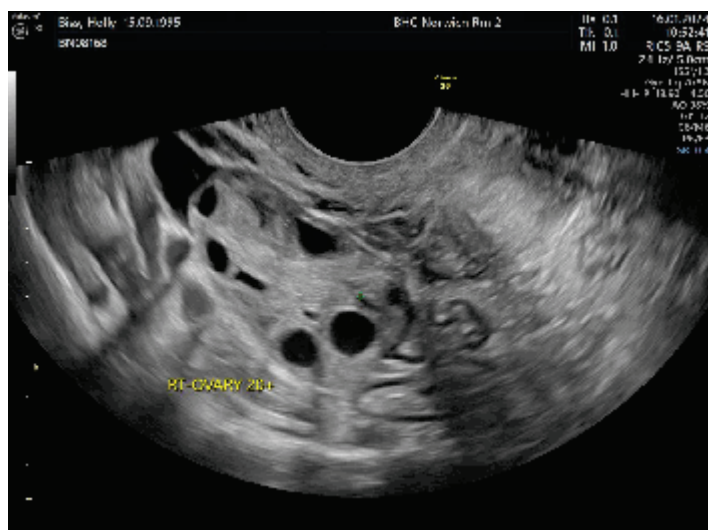

Both ovaries appear PCO - RO volume 20.8cm³, LO volume 12cm³ - did not discuss this at today's scan appointment as upcoming Dr's consultation in February

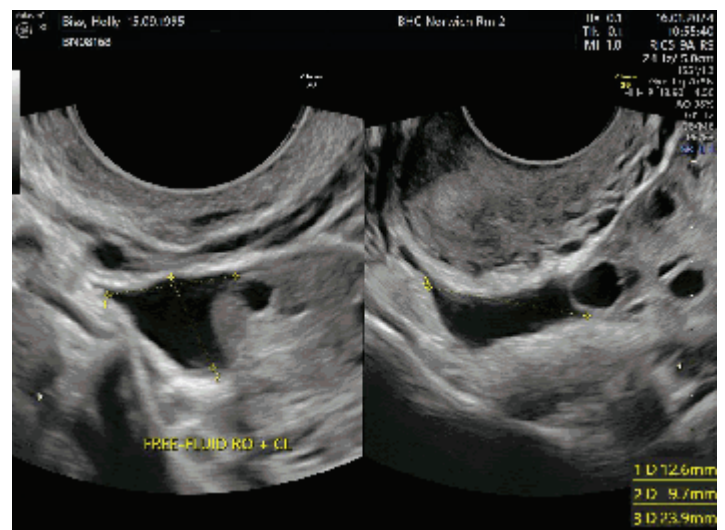

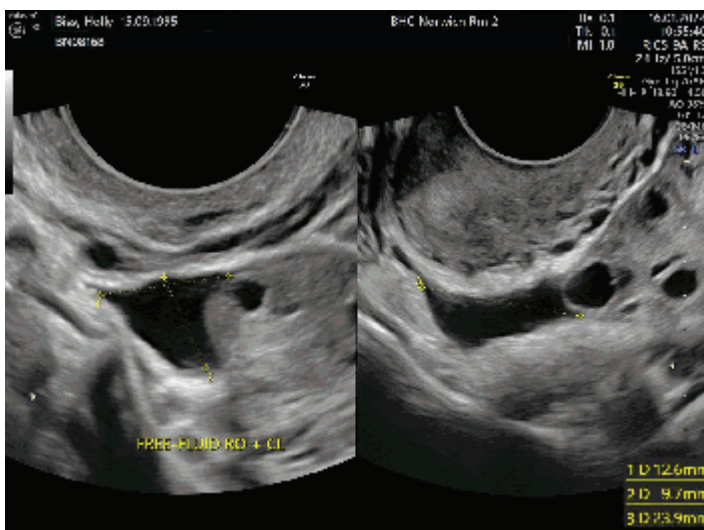

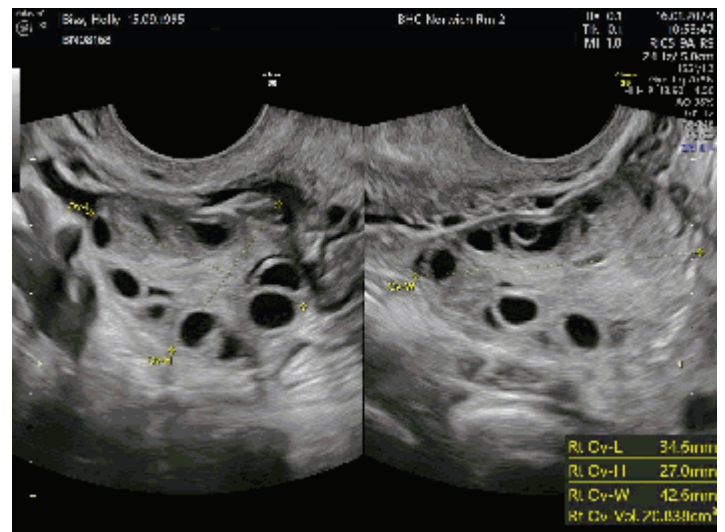

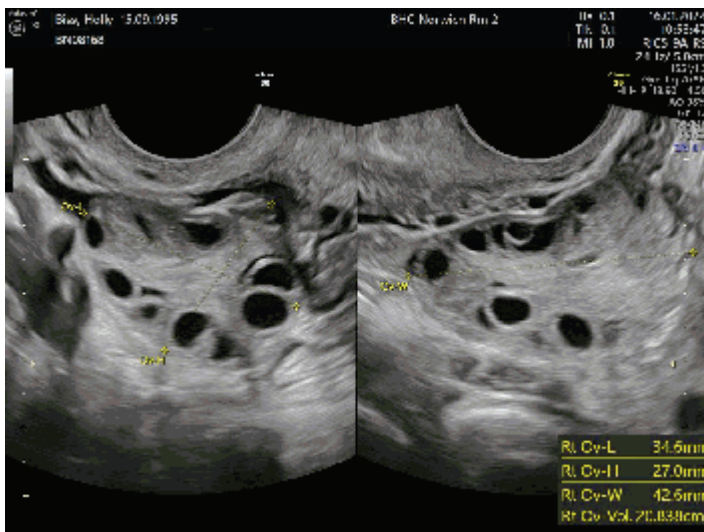

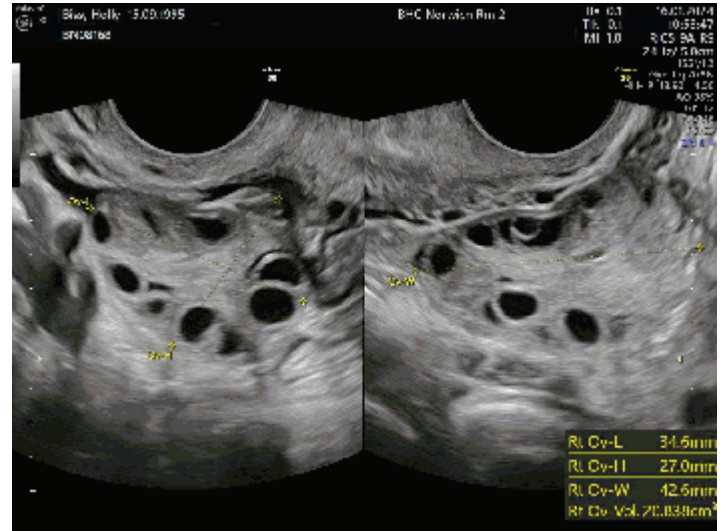

Both adnexa NAD

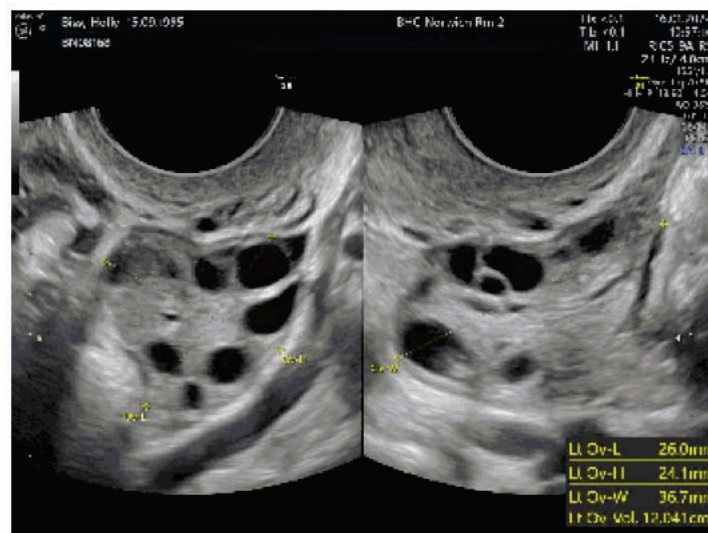

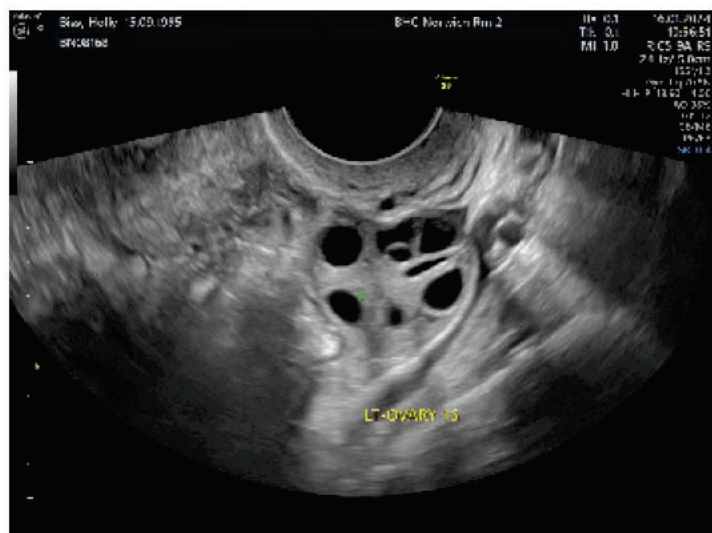

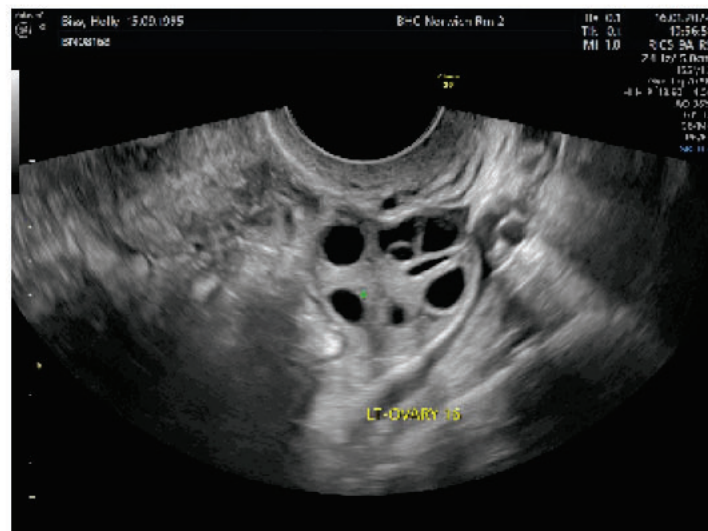

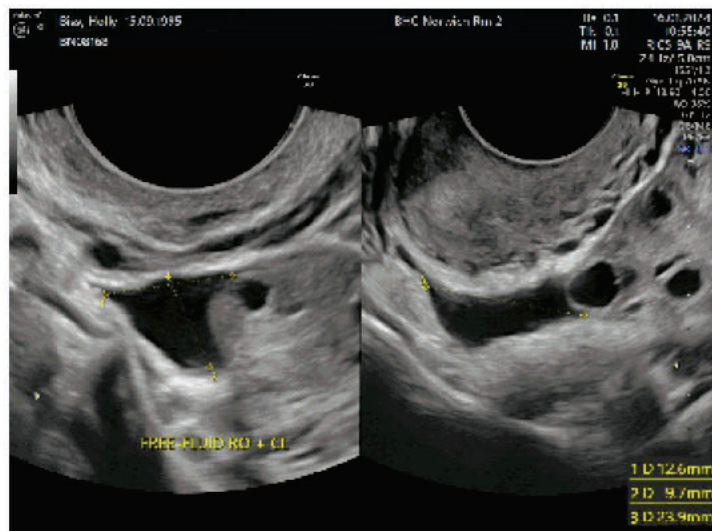

Left Ovary: L 26.0 mm W 36.7 mm H 24.1 mm Vol 12.041 cm3

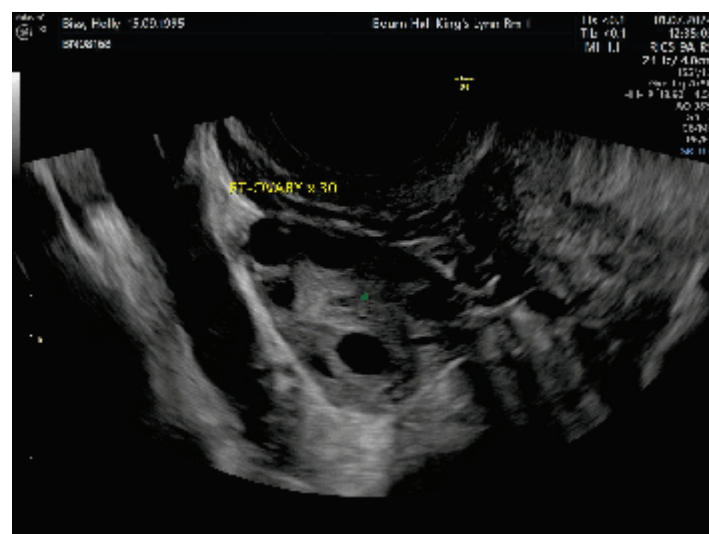

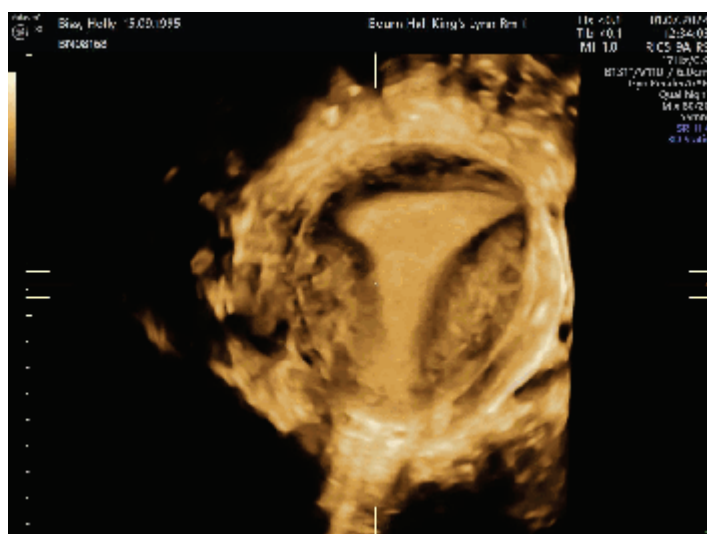

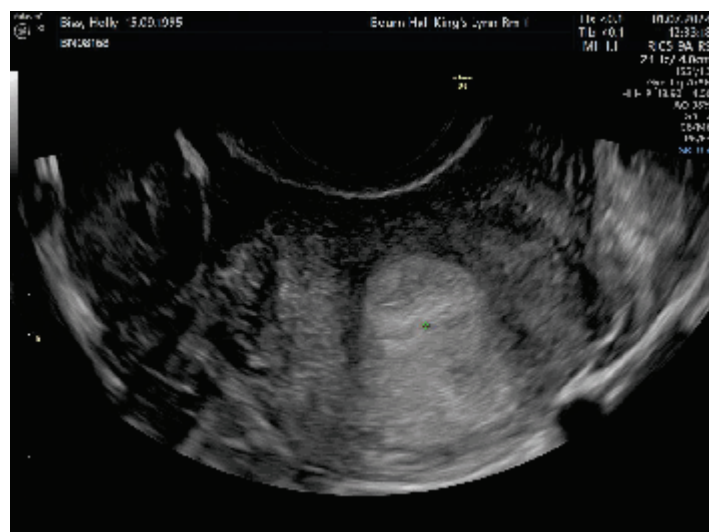

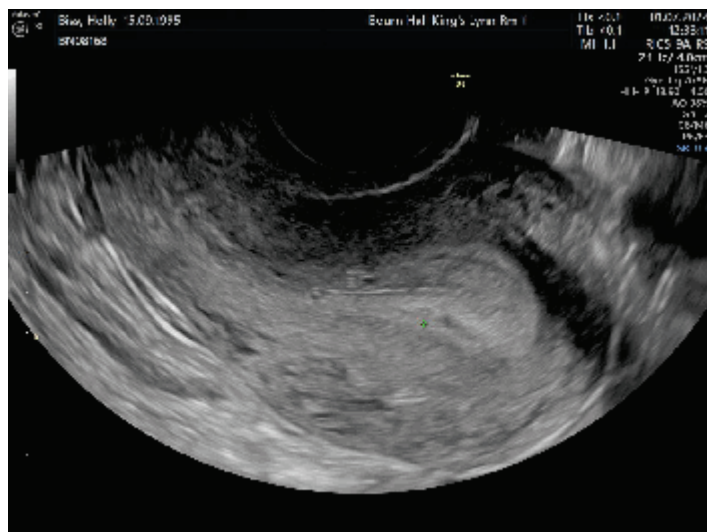

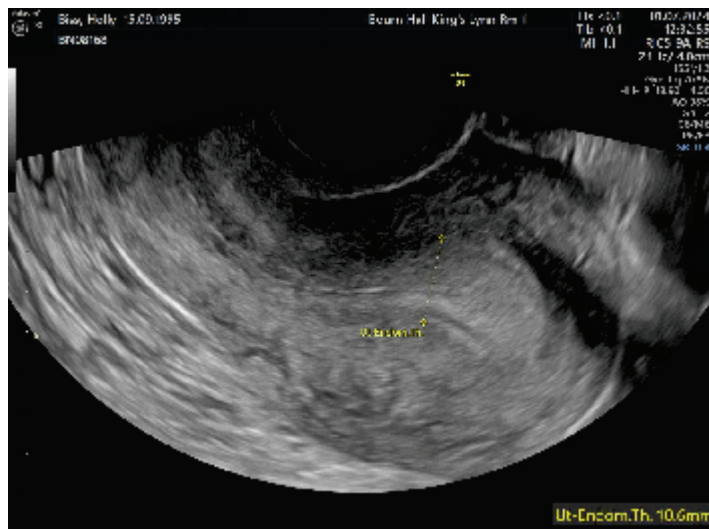

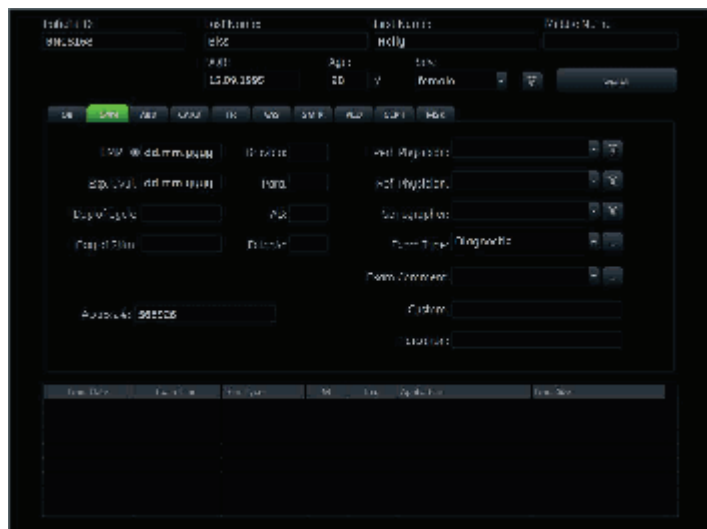

Date / Time: **01/07/2024 12:17**
Ultrasonographer: **Read, Louise**

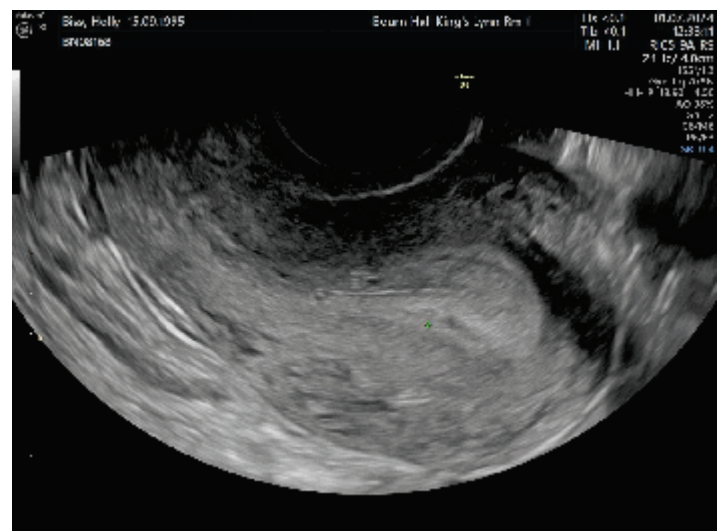

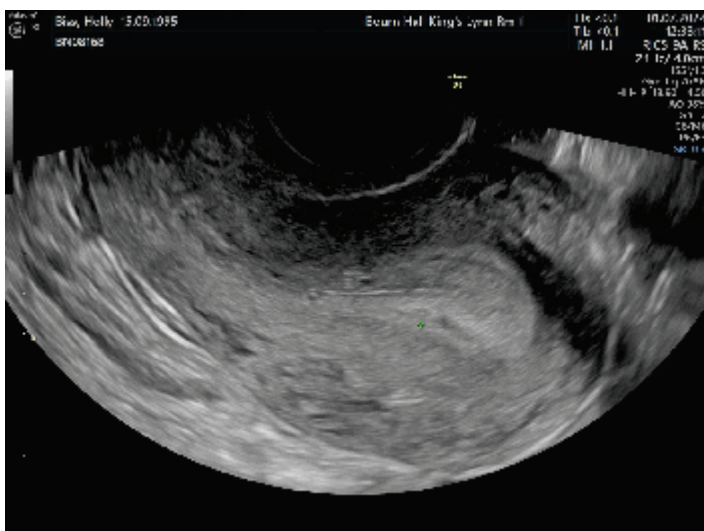

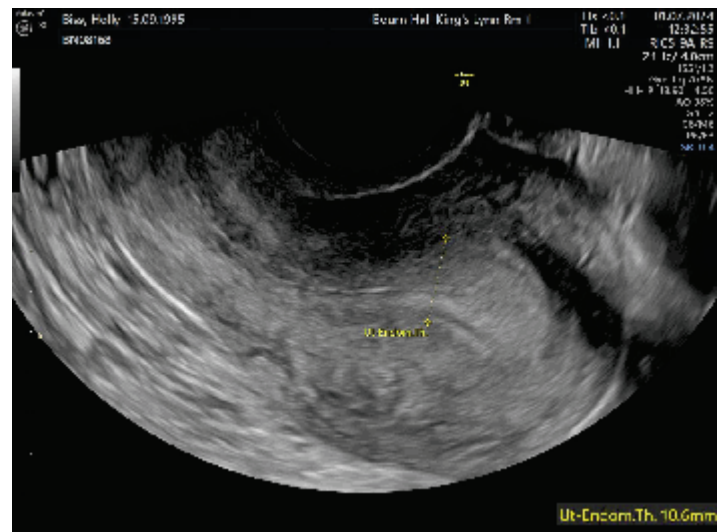

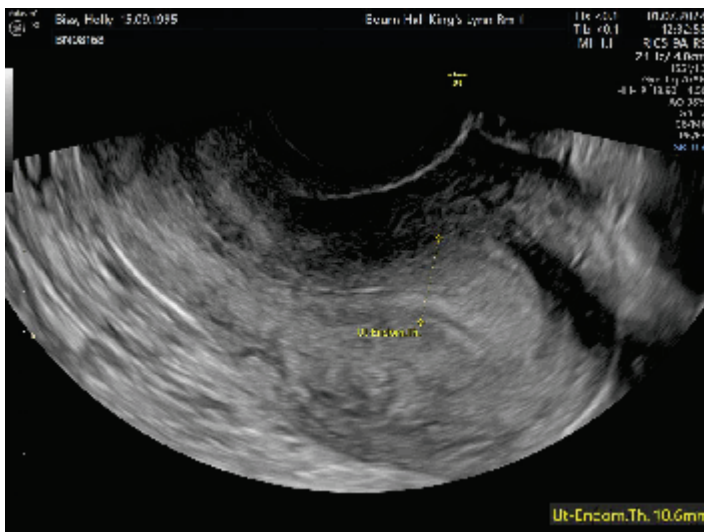

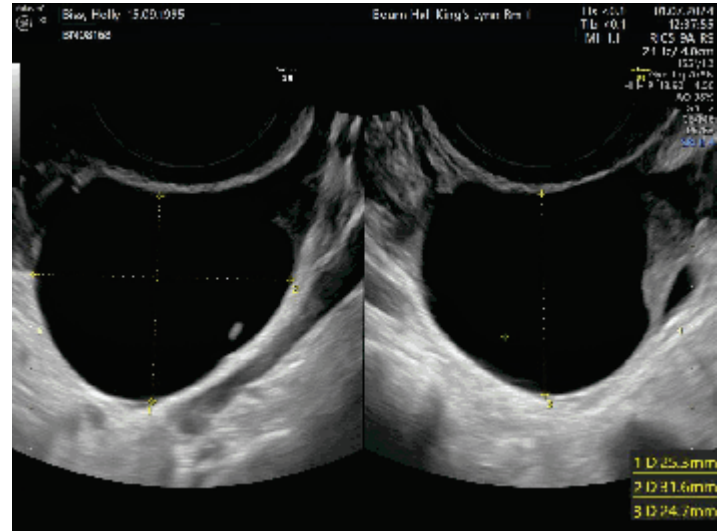

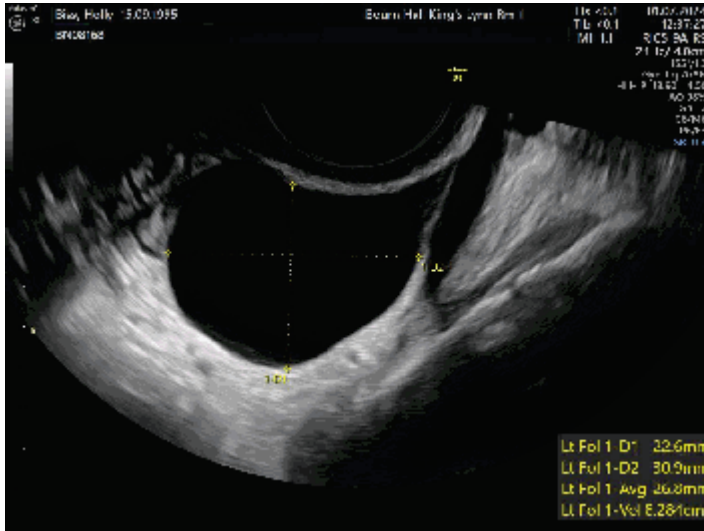

Diagnostic

Endometrial Thickness (mm): **10.6** Endometrial Quality: **B (Homogeneous)**

Comments

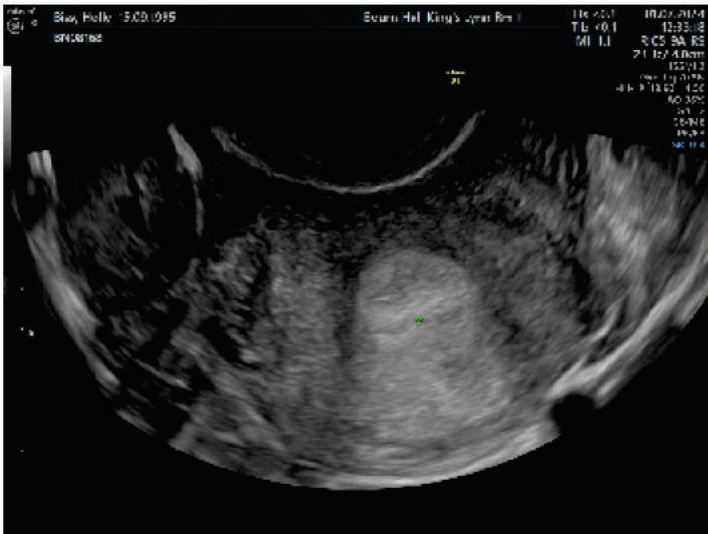

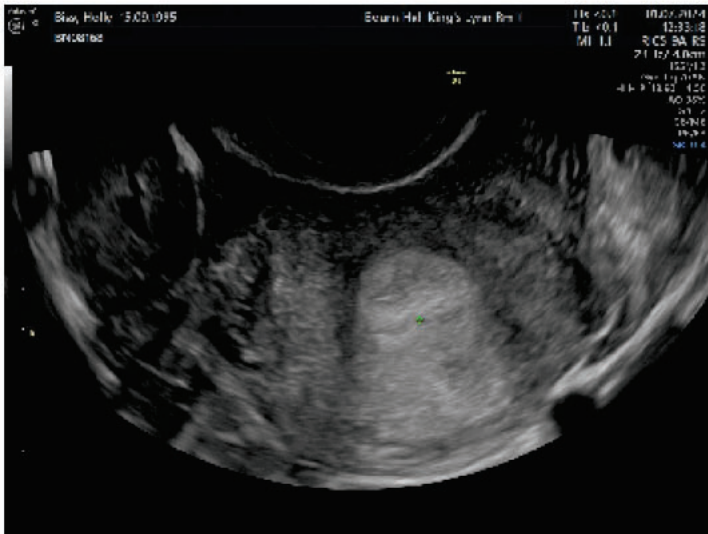

Attended for L2 diagnostic USS
Irregular cycles vary from 36 - 44. CD: 41 today
Anteverted uterus, 3D image shows normal shaped cavity.
Both ovaries visualised and appear accessible, good AFC on both ovaries & typical PCOS appearance.
Left ovary ? cyst noted measuring 27mm (see image 7)
Both adnexa NAD
PLAN: for management consult (order sent)

Comments

Anteverted uterus
Endometrium trilaminar
Both ovaries seen and appear accesible
Right ovary quiet.
2 dominant folliles on left ovary.
For regular intercourse. Aware risk of multiple pregnancy and happy to proceed.

Comments

OI 2nd cycle.
Anteverted uterus, endometrium trilaminar.
Both ovaries visualised, dominant follicle on right ovary.

Option of regular intercourse from now, or rescan friday for more specific timings.

Holly explained that they struggled to have intercourse as regularly as hoped for previously, due to [REDACTED] little girl bedsharing so having to manage private time around this.

Would therefore like another scan - booked for friday pm.

Comments

CD14, OI - 3rd cycle.

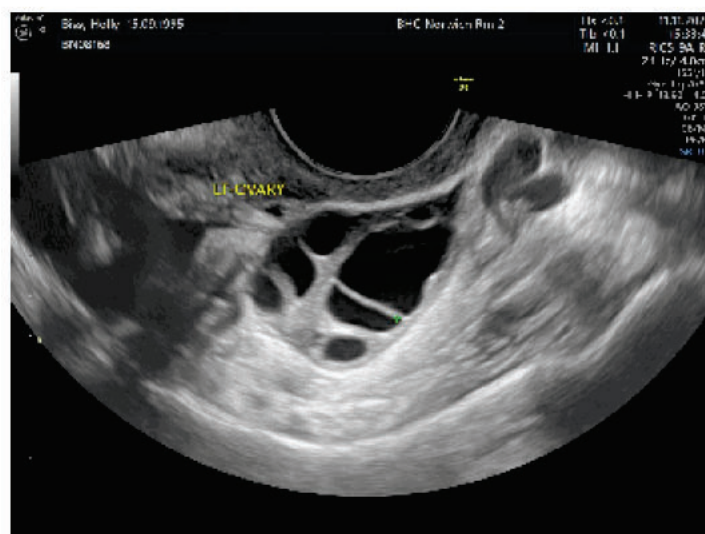

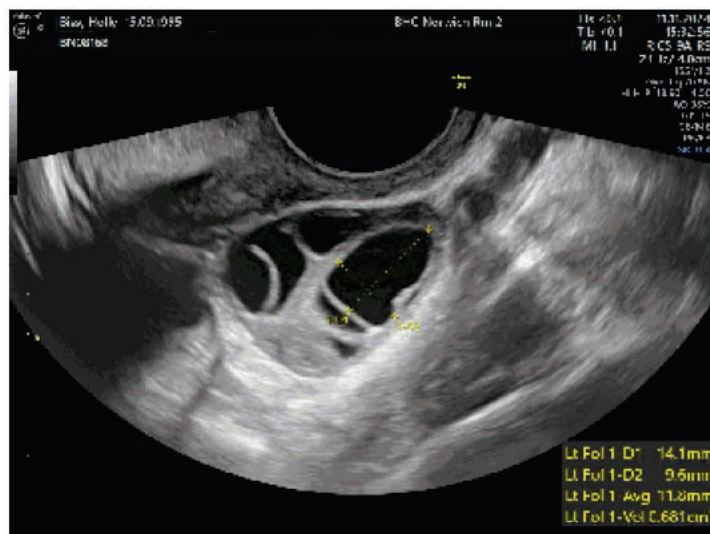

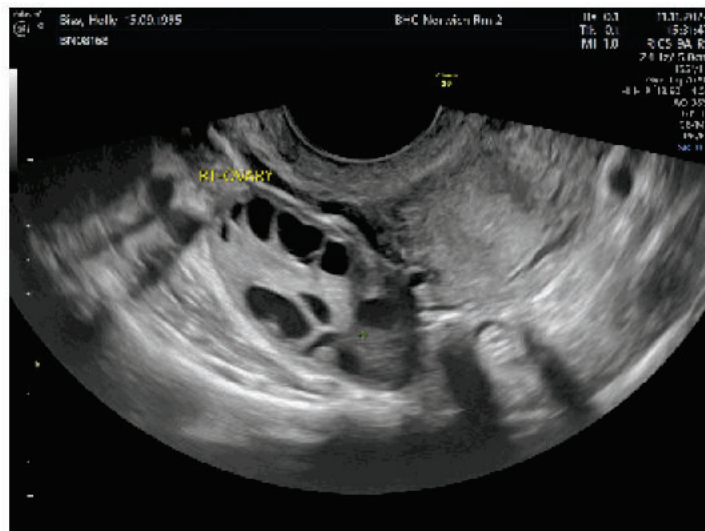

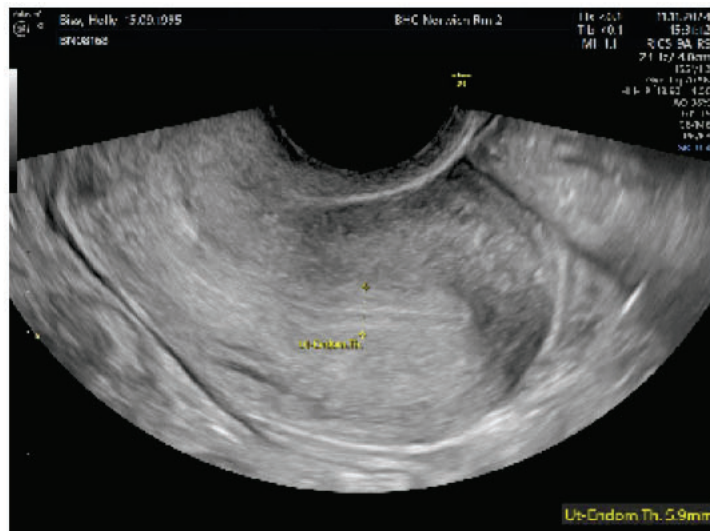

Anteverted uterus, endometrium trilaminar.

Both ovaries visualised, follicle on left ovary remains at 12mm.

Offered to abandon cycle or 1 further scan.

Holly would like 1 further scan to see.

Aware that if no growth, we would recommend abandoning cycle.
