Comments on Collection 25-Mar-24 1302:
Prostate Cancer Foundation and Cancer Council Australia PSA testing
guidelines 20 Jan 2016 www.prostate.org.au (NHMRC approved).
Elevated PSA above 5.5 ug/L indicates increased risk for prostate cancer.
Consider specialist referral.

An MSU is noted to be ordered. If urinary tract infection is confirmed,
suggest repeat PSA 4-6 weeks after resolution of infection.
