XRAY LEFT KNEE

Clinical Details:
Chronic left knee pain with recent knee injury for evaluation. Likely degenerative changes.

Findings:
There are tricompartmental OA changes of the left knee joint most advanced in the medial compartment where there is moderate to severe loss of joint space and mild subchondral sclerosis. There are small marginal osteophytes. There are much milder changes in the lateral and patellofemoral compartments. There is a small knee joint effusion. There is calcification in the distal quadriceps tendon as well as a focus of soft tissue calcification adjacent to the medial tibial plateau.

Radiologist: Dr J. Tamangani
