Clinical Summary

Summary

65M IHT from Castlemaine with AFwRVR and a Hx of 8 days of palpitations

On review:

HOPC Revisited

Denied any CP during any of these episode, Nil CP during this presentation

Had previous brief periods of possible Afs- 3 to 4 times in last 5 years- had Sx of sweats , palpitations at night at that times

Discussed about AF- rate control options - Dc version/

Had been persistently in AF HR 140-160 over night despite 1000 mcg of digoxin

Discussed about anticoagulation- risks bleedings, ICB with falls. PR bleeding vs benefits stroke / blood clot prevention. Happy to commence blood thinners given

O/E:

Lying on bed, alert comfortable

Had runs of AF up to 155 ATOR on telem

Investigations:

Telemetry: brief Runs of Af 160s-150s

ECG - atrial fibrillation with RVR

Bloods: FBC , EUC, TFT : NAD

Plan as discussed with cardiology team -

Digoxin 125 mcg mane

Metoprolol 50 mg BD

Commence Apixaban 5 mg BD

Cardiology OP f/up and OP TTE
