Comments on Collection 13-Jun-25 0952 F:  
C Reactive Protein

CRP is a more sensitive early indicator of an acute phase response than is  
ESR. It also returns towards normal more rapidly with improvement or  
resolution of the disease process.

If CRP is elevated, it can indicate disease activity of an inflammatory,  
infective or neoplastic nature.

Artefactually decreased CRP values occur when patients are treated with  
antibiotics containing carboxypenicillins including Ticarcillin.
