Thyroid Peroxidase Ab	<1.0	(	<5.6	)	IU/mL
Thyroglobulin Ab	<1.0	(	<4.1	)	IU/mL

Comments on Collection 686893597

Thyroid Antibodies: Levels up to 100 IU/mL can occur in normal subjects (5% of males, 15% of females - mainly elderly) and may also occur in non-thyroid autoimmune and chromosomal disorders.

Raised levels may occur in prodromal hypothyroidism before TSH elevations occur and may also be seen in thyrotoxicosis, thyroiditis, non-toxic goitre and thyroid cancer. The levels seen in Graves' Disease and Hashimoto's can vary from normal up to >1000, but are usually elevated.

Clinical Notes : hair loss, chronic loose stool, chronic iron deficiency

C Reactive Protein

CRP 0.5 ( <5 ) mg/L

Comments on Lab Id: 686893597

CRP is a more sensitive early indicator of an acute phase response than is ESR. It also returns towards normal more rapidly with improvement or resolution of the disease process.

If CRP is elevated, it can indicate disease activity of an inflammatory, infective or neoplastic nature.

Artefactually decreased CRP values occur when patients are treated with antibiotics containing carboxypenicillins including Ticarcillin.
