US BILAT GROIN 06/08/2025 Reference: 4211000

ULTRASOUND BOTH GROINS

CLINICAL: Lump at site of hernial repair on left and right (2015).

REPORT:

There is no evidence of inguinal or femoral hernia on either side.
No enlarged inguinal lymph nodes identified.
The palpable lump corresponds to slightly prominent cystic
structures, which are most likely representing mild around ligament
varices. No concerning findings are seen and further follow-up can be
performed as per clinical requirement.

Radiologist: Dr A. Bilal

US BILAT BREASTS 13/08/2025 Reference: 4215491

ULTRASOUND BILATERAL BREASTS

CLINICAL: Has had implants removed - 2021. Rule out breast lesions.

REPORT:

There are multiple bilateral breast cysts. These are simple and
mildly complicated cysts.

Notable findings are as follows:
Right breast:

A 1 cm oval nodule is seen at 7 o'clock position. This can represent an island of fibroglandular tissue vs a fibroadenoma.

Left breast:

There is a hypoechoic nodule at 6 o'clock position measuring 4 mm.

No enlarged axillary lymph nodes are seen.

IMPRESSION:

Bilateral likely benign findings but there are a couple of nodules which can represent mildly complicated cysts vs fibroadenomata in both breasts as described above. A short term follow-up with ultrasound in 3 months is recommended for reassessment and a mammogram is also advised.

Radiologist: Dr A. Bilal
