Requested 10/09/2025

Clinical Notes Not Provided

Collected 10/09/2025 11:59

Received 10/09/2025 11:59

## Homocysteine

Test Name	Result	Reference Interval	Units
Homocysteine	5.1	<15	umol/L

## Comments

Serum homocysteine levels are markedly elevated (50 - 500 umol/L) in homocystinuria which is associated with childhood onset of ocular lens displacement, skeletal abnormalities and arterial and venous thromboses. Moderate elevations of serum homocysteine (16 - 100 umol/L) are seen in folic acid, vitamin B12 and pyridoxine deficiencies, several genetic defects, and renal failure. Elevated levels of serum homocysteine are associated with increased risk of atherosclerosis and venous thromboembolism.

EA

SULLIVAN NICOLAIDES PTY LTD. ABN 38 078 202 196. NATA/RCPA ACCREDITATION NO 1964

Reported on 11-Sep-25 14:12

Lipoprotein (a)	<5	<75	nmol/L
-----------------	----	-----	--------

## Comments

The Australian Atherosclerosis Society suggests the following cardiovascular risk thresholds (Heart Lung Circ. 2023 Mar;32(3):287-296).

Estimated ASCVD risk	Lp(a) level (in nmol/L)
Low	< 100
Moderate	100 - 200
High	200 - 400
Very high	> 400

Higher concentrations of Lipoprotein (a) may be seen in renal impairment, pregnancy, hypothyroidism, growth hormone replacement, and inflammatory conditions. Severe acute phase conditions, hyperthyroidism, and menopausal hormone therapy may decrease concentrations.
