| Creat Corr. Iodine | 106  | ( >100 ) | ug/L   |

Comments on Lab Id: 527152346

Iodine levels are interpreted using the WHO criteria. However, the creatinine-corrected iodine level allows for iodine assessment in urine samples which are more dilute or concentrated than usual.

WHO classification of iodine deficiency - Urine Iodine levels:

|                             |               |       |
|-----------------------------|---------------|-------|
| Not Iodine deficient:       | >100 ug/L     | urine |
| Mild Iodine deficiency:     | 50 - 100 ug/L | urine |
| Moderate Iodine deficiency: | 20 - 49 ug/L  | urine |
| Severe Iodine deficiency:   | <20 ug/L      | urine |

To convert Iodine ug/L to Iodine nmol/L  
 $\text{ug/L} \times 7.88 = \text{nmol/L}$

HMRC recommends supplementation of 150ug/day of Iodine to ensure that all women who are pregnant, breastfeeding or considering pregnancy have adequate iodine status. Women should not take kelp (seaweed) supplements or kelp based products because they may contain varying levels of iodine and may be contaminated with heavy metals such as mercury.

Helicobacter pylori

Helicobacter pylori IgG (ChLIA) Negative

Comments on Collection 527152346

No serological evidence of past or current *Helicobacter pylori* infection.

If this is an acute specimen, a further sample in 10 - 14 days may be clinically indicated.

H.pylori infection has been linked to duodenal (100%) and gastric (70%) ulceration but also to non-ulcer dyspepsia (40-50%), gastric carcinoma, primary gastric lymphoma and iron deficiency anaemia. Infection results in chronic inflammation of the gastric antrum sometimes with no symptoms or immediate clinical consequences. Eradication therapy for all patients with active H.pylori infection is recommended.

Comments on Lab Id: 527152346

Consistent with iron deficiency. During reproductive years, iron deficiency in women commonly reflects menstrual losses or multiparity. However, a low dietary iron intake should also be considered, and investigation of the GIT for a source of blood loss may be indicated.

All patients with low or equivocal vitamin B12 results (400 pmol/L or less) will be routinely tested for holo-transcobalamin (active B12) to clarify the B12 status.  
Both tests are now Medicare rebateable. Vitamin B12 concentrations over 400 pmol/L are generally considered replete.

Thyroid Antibodies: Levels up to 100 IU/mL can occur in normal subjects (5% of males, 15% of females - mainly elderly) and may also occur in non-thyroid autoimmune and chromosomal disorders.

Raised levels may occur in prodromal hypothyroidism before TSH elevations occur and may also be seen in thyrotoxicosis, thyroiditis, non-toxic goitre and thyroid cancer. The levels seen in Graves' Disease and Hashimoto's can vary from normal up to >1000, but are usually elevated.

C Reactive Protein

CRP <0.4 (<5) mg/L

Comments on Lab Id: 527152346

CRP is a more sensitive early indicator of an acute phase response than is ESR. It also returns towards normal more rapidly with improvement or resolution of the disease process.

If CRP is elevated, it can indicate disease activity of an inflammatory, infective or neoplastic nature.

Artefactually decreased CRP values occur when patients are treated with antibiotics containing carboxypenicillins including Ticarcillin.

**Insulin**

S-Insulin 3 ( 3 - 15 ) mU/L

Comments on Collection 527152346

Please note: The insulin reference interval only refers to a fasting collection  
Insulin concentration measured on Abbott Alinity. To convert to pmol/L, please multiply result by 6.  
Please note: Different insulin assays may give variable concentrations.  
Exogenous insulin use can also result in different concentrations depending on the type of insulin administered.

| Yersinia enterocolitica | Not Detected |
| Aeromonas               | Not Detected |

Comments on Collection 527152347

Not detected results indicate the absence of detectable nucleic acids in this sample for the enteropathogens reported. Only the reported enteropathogens have been tested.

All bacterial causes of gastroenteritis reported by PCR are cultured for recovery of isolates subject to organism viability and a further report issued. Some clinical indications e.g overseas travel, eosinophilia, seafood or antibiotic ingestion will require additional parasite concentration examination, culture setup or molecular testing to detect alternative pathogens e.g. hookworm, strongyloides, Vibrios, Clostridium difficile infection (CDI), Enterohaemorrhagic E. coli (STEC). These indications should be highlighted on the request.

Roche LightMix Gastroenteritis multiplex PCR assays were utilised for testing.

For further enquiries regarding these results please contact Dr Jenny Robson or Dr Sarah Cherian (07 3377 8534).
