B12, Folate, Homocysteine Assessment (Serum)

Coll Date: 09/10/25
Coll Time: 08:52
Lab Number: 16872736

Vitamin B12	259	(160-650)	pmol/L
Homocysteine	15 H	(4-14)	umol/L

Possible B12 deficiency.

B12 results 160-350 are inconclusive and may occur in B12 deficiency. These results are reflexed to Homocysteine which is elevated in B12 and Folate deficiency. A normal homocysteine result is evidence of normal B12 status. We suggest reviewing Folate results in conjunction with inconclusive B12 results. Causes of B12 deficiency include dietary deficiency, pernicious anaemia, other malabsorptive conditions such as Crohns, medications metformin and proton pump inhibitors. If indicated laboratory assessment includes haematological review, intrinsic factor and gastric parietal cell antibodies, coeliac serology. Note homocysteine is also elevated with smoking, renal disease, hypothyroidism, some drugs and a number of rare inherited metabolic disorders.

It is suggested that inconclusive results with elevated homocysteine follow up testing is repeated in 3 months.
