Faeces PCR

Specimen Type	Faeces
Parasites:	
Giardia intestinalis	Not Detected
Cryptosporidium	Not Detected
Dientamoeba fragilis	Not Detected
Entamoeba histolytica	Not Detected
Blastocystis hominis	Not Detected

Bacteria:

Campylobacter spp.	* Detected
Salmonella spp.	Not Detected
Shigella spp./EIEC	Not Detected
Yersinia enterocolitica	Not Detected
Aeromonas	* Detected

Comments on Collection 686240719

DNA consistent with the presence of Campylobacter has been detected using PCR with specific primers and probe. Campylobacter enteritis is a foodborne zoonosis that is usually self-limited. Rehydration is the mainstay of therapy. Antibiotic therapy is indicated in those with severe disease (high fever, tachycardia, leucocytosis, abdominal tenderness or severe abdominal pain, high-volume diarrhoea with hypovolaemia, bloody stool or prolonged symptoms). Therapy may also be reasonable in the third trimester of pregnancy, infants, the frail elderly, and in patients who are immunocompromised.

Treatment options include azithromycin 500 mg (child: 10 mg/kg up to 500 mg) orally, daily for 3 days ciprofloxacin 750 mg (child: 10-20 mg/kg) orally, 12-hourly for 3 days The incidence of macrolide- or quinolone-resistant Campylobacter strains appears to be increasing. For resistant infections, please contact the clinical microbiologists (0733778666).

An organism is categorised as I - 'Susceptible, increased exposure' indicates a high likelihood of therapeutic success when the antibiotic exposure is maximised (e.g. by dosing in the upper range or increasing the frequency of dosing). <https://snp.com.au/links/abx/> DNA consistent with the presence of Aeromonas has been detected using PCR with specific primers and probe. Aeromonas spp. have been implicated as a cause of both acute and persistent diarrhoeal illness in children, particularly those under 6 years of age, and may be associated with diarrhoeal illness in adults. Antibiotic therapy may only be indicated where diarrhoea persists and other pathogens have not been detected. Aeromonas

spp. are usually sensitive to trimethoprim-sulfamethoxazole, and fluoroquinolones. Sensitivity to tetracyclines is variable.

Only the reported enteropathogens have been tested.

All bacterial causes of gastroenteritis reported by PCR are cultured for recovery of isolates subject to organism viability and a further report issued. Some clinical indications e.g. overseas travel, eosinophilia, seafood or antibiotic ingestion will require additional parasite concentration examination, culture setup or molecular testing to detect alternative pathogens e.g. hookworm, strongyloides, Vibrios, Clostridium difficile infection (CDI), Enterohaemorrhagic E. coli (STEC). These indications should be highlighted on the request.

Roche LightMix Gastroenteritis multiplex PCR assays were utilised for testing.

Notifiable result reported to the State Health Department.

For further enquiries regarding these results please contact Dr Jenny Robson or Dr Sarah Cherian (07 3377 8534).

Sapovirus	Not Detected

Comments on Collection 686240719

Not detected results indicate the absence of detectable nucleic acids in this sample for the enteric viruses reported. Testing was performed utilising the Seegene Allplex GI Virus PCR assays validated by this laboratory. Only the enteric viral targets reported are tested for. For further enquiries regarding these results please contact

Dr Jenny Robson or Dr Sarah Cherian (07 3377 8534).

Comments on Collection 19-Sep-25 0710 F:
C Reactive Protein
CRP is a more sensitive early indicator of an acute phase response than is ESR. It also returns towards normal more rapidly with improvement or resolution of the disease process.

If CRP is elevated, it can indicate disease activity of an inflammatory, infective or neoplastic nature.

Artefactually decreased CRP values occur when patients are treated with antibiotics containing carboxypenicillins including Ticarcillin.

Comments on Collection 19-Sep-25 0710 F:

Iron Studies

Normal Iron Status.

B12 deficiency is unlikely.

If the patient has a haematological malignancy or uses nitrous oxide recreationally consider measuring homocysteine or methylmalonic acid (MMA) as total B12 can be falsely normal. MMA incurs an out of pocket cost.

Homocysteine	7.3	6.8	(3-12)	umol/L

Comments on Collection 19-Sep-25 0710 F:
Serum homocysteine levels are markedly elevated (50 - 500 umol/L) in homocystinuria which is associated with childhood onset of ocular lens displacement, skeletal abnormalities and arterial and venous thromboses. Moderate elevations of serum homocysteine (16 - 100 umol/L) are seen in folic acid, vitamin B12 and pyridoxine deficiencies, several genetic defects, and renal failure. Elevated levels of serum homocysteine are associated with increased risk of atherosclerosis and venous thromboembolism.
Please note: as of the 15/09/2025 Homocysteine reference intervals have been updated to age-related intervals.

Clinical notes: new palpitations every hour

Clinical Notes : new palpitations every hour

HOLTER MONITOR REPORT

Height	0	cm	cm
Weight	0	Kg	Kg
Start date and time	22/09/2025 11:13		
Duration	23:35	HH:MM	HH:MM

24 Hour Holter Monitor

1. The underlying rhythm was sinus. The average heart rate was 74 bpm during the day, 54 bpm at night and 67 bpm over the complete recording. Intermittent nocturnal 2nd atrial focus ?junctional rhythm (56 bpm).
2. Supraventricular activity - Five isolated SVEs.
3. Ventricular activity - Infrequent 0.43% bifocal isolated PVCs, fusion beats and one 6.3sec trigminy run.
4. No significant pauses (>2.5 seconds). The longest R-R interval was 1.58 seconds at 21:56, following isolated PVC.
5. Max HR = 124 bpm at 09:15, sinus tachycardia.
6. Min HR = 43 bpm at 23:28, sinus bradycardia.

There were 13 patient diary events recorded with the symptom "palpitations" which corresponded to sinus rhythm/sinus bradycardia 55-96 bpm including isolated PVCs.

Conclusion: Sinus rhythm with an average heart rate of 67 bpm. Intermittent nocturnal 2nd atrial focus ?junctional rhythm (56 bpm). Infrequent 0.43% bifocal ventricular ectopy. There were 13

patient diary events which corresponded to sinus rhythm/sinus
bradycardia 55-96 bpm including isolated PVCs.
