

PRIME RADIOLOGY MEDICAL IMAGING REPORT

TO: Dr Saloni Shah, Victahealth, 1 334 South Street, O'Connor 6163, Ph: 0893379555,

REF: Ms Gabriella HUNWICK, DOB: 02-08-1988, Gender: Female

Service date: 02-10-2025, Patient ID: 304838, Accession no: 948242, Site: Hilton

ULTRASOUND OF NECK

CLINICAL HISTORY:

Known hyperthyroidism. No neck pain.

ADDITIONAL INFO:

Patient demographics: 37 years, Female

Comparison: No prior relevant imaging available for comparison.

FINDINGS:

Both parotid glands are unremarkable.

Both submandibular glands appear normal.

The thyroid gland demonstrates mildly heterogeneous parenchyma with moderately increased vascularity bilaterally, findings most consistent with thyroiditis.

Right lobe of thyroid:

Normal in size, measuring 8.5 cc. No nodules are seen.

Isthmus:

Normal in size, measuring 3.3 mm. No nodules are seen.

Left lobe of thyroid:

Normal in size, measuring 8.2 cc. No nodules are seen.

Normal-appearing cervical lymph nodes are identified.

CONCLUSION:

Mildly heterogeneous and hypervascular thyroid gland, most consistent with thyroiditis in the context of known hyperthyroidism.

No thyroid nodules or cervical lymphadenopathy identified.

Thank you for your referral.

Yours Sincerely

Dr. Vijay Sarode MBBS, MD, FRANZCR,
Fellow in Interventional Radiology (USA)
Fellow in Paediatric Radiology (USA)
Consultant Radiologist
