Comments on Collection 14-Oct-25 0904 F:

Individuals should be screened for risk of diabetes every 3 years from age 40 years (or from age 18 years if Aboriginal or Torres Strait Islander) using AUSDRISK.

<http://www.health.gov.au/preventionoftype2diabetes>

Individuals at high risk should be tested every 3 years via fasting blood glucose.

eGFR and creatinine normal. The slightly raised urea is most likely due to overnight fasting.

Advice (Drs only) call Dr Devika Thomas 83662000

Comments on Collection 14-Oct-25 0904 F:  
A negative cardiac Troponin result does not exclude acute coronary syndrome (ACS). A rise in the level of Troponin is dependent upon the interval between a possible ischaemic event and specimen collection. If ACS is suspected, then serial Troponin testing is recommended.

Please note that for the purpose of assessing serial changes in cardiac marker status, Troponin values obtained by different methods may not be directly comparable.
