MRI BRAIN AND ORBITS

CLINICAL HISTORY:
Intermittent diplopia

TECHNIQUE:
Multiplanar multisequence imaging performed through the brain and dedicated non-contrast orbits .

FINDINGS:
Ventricular size and sulcal prominence are age appropriate. Normal flow-voids are seen in the major intracranial arteries and dural sinuses. There is no ischaemia, demyelination or space occupying lesion.
The orbits appear normal. Orbital apices and the sella and suprasellar regions are normal. Small mucous retention cyst inferior left maxillary sinus but there is no sinusitis.

CONCLUSION:
Normal brain and orbits.

Dr Sarah Nguyen
