ULTRASOUND LEFT SHOULDER**Clinical Details:** ?Tendinopathy/subacromial bursa. No trauma.**Findings:** The supraspinatus and infraspinatus tendons are intact.

There is mild subscapularis tendinopathy.

The long head of biceps tendon is intact and lies in the bicipital groove. There is a moderate biceps tendon sheath effusion.

There is mild thickening of the subacromial-subdeltoid bursa without evidence of bursal impingement on abduction.

There is a small effusion of the glenohumeral joint.

There are degenerative changes of the AC joint. No tenderness on palpation of the joint.

Comment: Mild thickening of the subacromial-subdeltoid bursa without evidence of bursal impingement.**Reporting Doctor:** Dr. Mal Mccloskey
