MRI C SPINE 14/11/2020 Reference: 13050142

Clinical History: Neck pain radiating to the RUL, x-ray shows C5-6 narrowing of disc space

MRI cervical spine: Spinal cord is of normal signal, with no myelomalacia.

C2-3: No disc protrusion, central canal or left foraminal stenosis. Mild right foraminal stenosis secondary to uncovertebral osteophytes.

C3-4: No disc protrusion or central canal stenosis. Mild bilateral foraminal stenosis.

C4-5: No disc protrusion central canal or left foraminal stenosis. There is severe right foraminal stenosis of the exiting right C5 nerve root. Likely severe right facet OA.

C5-6: There are degenerative disc changes, with loss of disc space, reactive endplate changes, and osteophyte formation. Mild central canal stenosis secondary to posterior osteophytes. Mild right and moderate left foraminal stenosis.

C6-7: No significant disc protrusion or neural compression.

C7-T1: No significant disc protrusion or neural compression.

Conclusion: Potential impingement of the right C5 nerve root

Radiologist: Dr Y. Kwong
