Adjusted risk Trisomy 13 = <1:20000

The estimated risk is calculated by the FMF-2009 software and is based on findings from extensive research coordinated by the Fetal Medicine Foundation (UK registered charity 1037118). The risk is only valid if the ultrasound scan was performed by a sonographer who had been accredited by the Fetal Medicine Foundation and has submitted results for regular audit (see:www.fetalmedicine.com). The adjusted risk is the risk at the time of screening. Nasal bone included. The FMF risk calculation for this scan was performed by Fiona Lu.
