

I-MED

REGIONAL IMAGING RIVERINA

15th January 2004

Dr F Mc Gee
113 Main Street, PO Box 117
WEST WYALONG 2671

Dear Dr Mc Gee

Re: Mrs Moira Parkes - DOB: 21/03/75
56 Church Street WEST WYALONG NSW

Date of Examination: 15th January 2004

Clinical notes: Pain Lt leg. Back pain.

CT LUMBOSACRAL SPINE

Technique:

Multislice axial scans and reformatted sagittal scans were performed of the lumbar spine.

Findings:

There is normal vertebral body height and alignment. There is loss of disc height at T12/L1 and L1/2 with end plate irregularity consistent with Schmorl's node formation. There is no evidence of bone destruction. No evidence of pre vertebral soft tissue mass.

L1/2, L2/3 and L3/4 - There is no evidence of disc herniation, central canal stenosis, subarticular/lateral recess stenosis or foraminal stenosis.

L4/5 - There is a minimal central disc protrusion without evidence of central canal stenosis, subarticular/lateral recess stenosis or foraminal stenosis.

L5/S1 - There is a minimal broad based disc bulge without evidence of central canal stenosis, subarticular/lateral recess stenosis or foraminal stenosis.

Conclusion:

1. Schmorl's node formation with degenerative disc changes at T12/L1 and L1/2.
2. Minor disc herniations at L4/5 and L5/S1 without evidence of nerve root compression.

Thank you for this referral.

RADIOLOGIST: R. PADMANABHAN
