US INJ (L) SHOULDER GH JOINT

Reported by: KWONG, YUNE

Report Status: Distributed

Clinical History: Frozen shoulder

Ultrasound guided left glenohumeral joint injection:

After consultation with the patient, the following procedure was performed with aseptic technique. Under ultrasound guidance, a 25 G needle was advanced into the posterior glenohumeral joint, and a combination of 1ml Celestone and 5ml 1% lignocaine was injected. No immediate complications.
