Our Ref: 1076810

Service Date: 12 October 2022

Visit Description: XRAY CERVICAL AND LUMBAR SPINE

XRAY CERVICAL AND LUMBAR SPINE

HISTORY

Cervical and lumbopelvic pain with accompanying facet inflammation

REPORT

2 views of the cervical spine.

There is straightening of the cervical lordosis.

There is suggestion of facet joint arthropathy on the left at C5/6 and on the right to a lesser degree on frontal projection however the lateral projection appears normal.

The bony outlines appear normal. No cervical ribs are seen.

2 views of the lumbar spine.

Endplate sclerosis at the L5/S1 level suggests degenerative disc disease.

There is partial sacralisation of the L5 vertebra on the right.

Bony outlines, discs and facet joints are otherwise normal and no pars defects are present.

There is slight irregularity of the superolateral right acetabular margin which may be a cause of impingement.

Reported by:

DR JULIA WILLIAMS, FRANZCR
Onsite Radiologist
